

INNER DRIVE AT HAWTHORNE PLACE

Existing Conditions

- Inner Drive has one travel lane in each direction with parking on both sides.
- Hawthorne Place is a stop-controlled intersection with unmarked pedestrian crossings.
- Narrow sidewalk/waiting area provided for northbound bus stop.
- No separation between Inner and Outer Drives.
- Lakefront access is through narrow, dark underpasses with blind corner access ramps that do not meet Americans with Disability Act (ADA) standards.

Potential (All Alternatives)

- Inner Drive maintains one travel lane in each direction with parking on both sides.
- Hawthorn Place will be converted to a signalized intersection with pedestrian refuge islands to improve traffic flows and pedestrian crossings.
- Improved northbound bus stop waiting area and conditions are provided.
- New park space is provided between Inner and Outer Drives with opportunities for landscaping and trees. A wide, shared-use path is provided along the east side of Inner Drive.
- Wider underpasses with increased vertical clearance create a more inviting connection to lakefront. All access locations will meet Americans with Disability Act (ADA) requirements.
