

North Lake Shore Drive Corridor Planning Committee/ Task Force Meeting #4

December 8, 2015

Welcome

Meeting Agenda

- **Introductions & Purpose of the Meeting**
- **Alternatives Development & Evaluation Process Progress**
 - Public Meeting #2
 - Purpose & Need & EIS Process
 - Evaluation Process
 - Travel Demand Modeling
- **Building an Improvement Alternative**
 - Junction Treatments
 - Transit Treatments
 - Non-Motorized Travel Considerations
 - Shoreline Considerations
 - Example: Chicago Avenue Junction Concepts
- **Next Steps**

Public Meeting #2

- 330 people attended
- 750 comments received which included 1,600 ideas
- Variety of methods to collect input:
 - Share your ideas worksheet
 - Comment cards
 - Online mapping comment tool
 - Online comment form/project email

Topic Areas

ROADWAY

TRAILS

SHORELINE

TRANSIT

GREEN SPACE & PARKS

Environmental Impact Study (EIS) Process

Data
Collection

Purpose
& Need

Alternatives Development & Evaluation

*Initial
Alternatives*

*Alternatives
Carried Forward*

*Finalist
Alternatives*

Preferred
Alternative

Stakeholder Involvement and Agency Input

NLSD Purpose and Need

- Improve safety for all users
- Improve mobility for all users
- Address infrastructure deficiencies
- Improve access and circulation

Alternatives Development & Evaluation

Stakeholder Involvement and Agency Input

Data
Collection

Purpose
& Need

Alternatives Development & Evaluation

*Initial
Alternatives*

*Alternatives
Carried Forward*

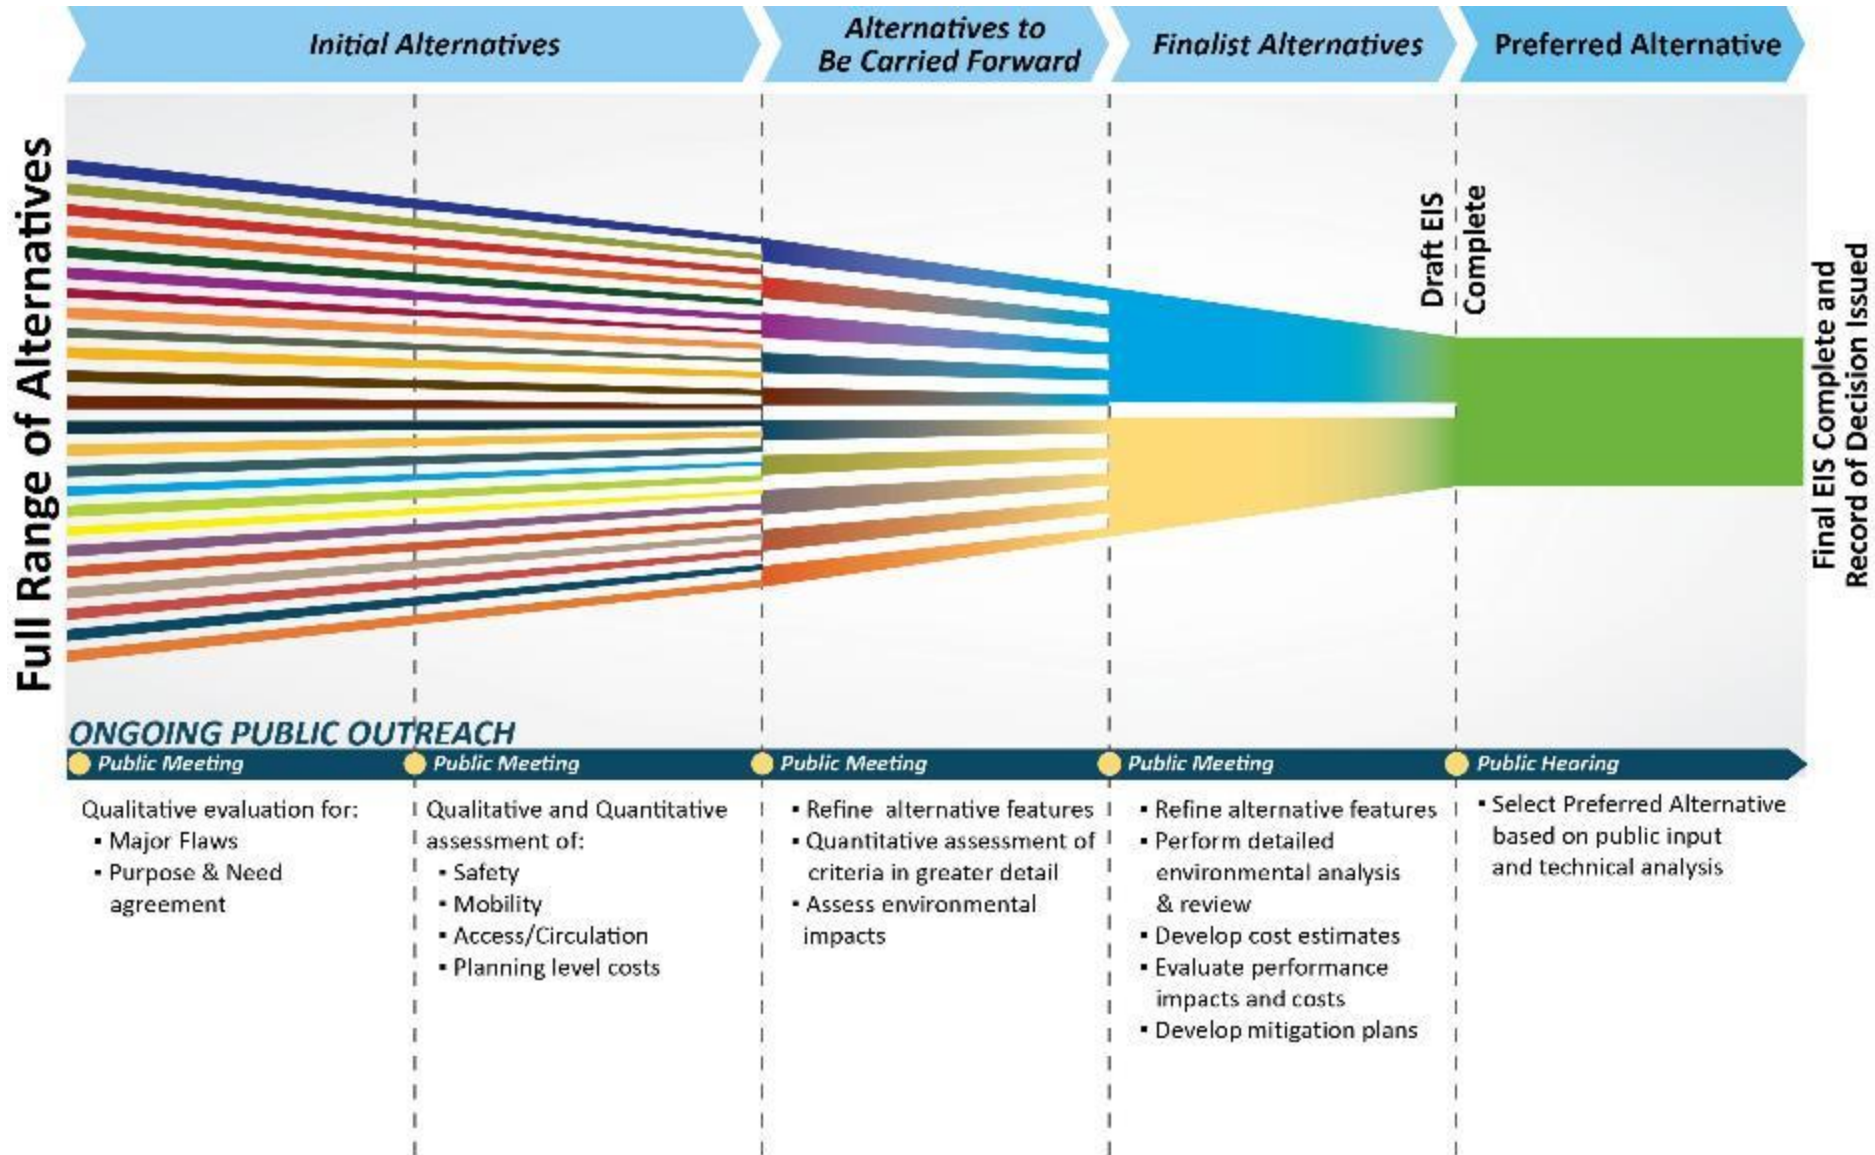

*Finalist
Alternatives*

Preferred
Alternative

***Initial
Alternatives***

- Establish transportation performance criteria
- Identify existing environmental constraints
- Sketch alternatives
- Eliminate alternatives and combinations that do not address Purpose & Need
- Compare transportation benefits of alternatives – eliminate underperforming alternatives

Alternatives Development & Evaluation

Alternatives Development & Evaluation

Iterative Process of Evaluation

Initial Alternatives

- Major Flaws
- Purpose and Need Agreement
- Performance Assessment
- Planning Level Cost Estimate

Alternatives to be Carried Forward

- Revise and Refine Features
- More Detailed Performance Assessment
- Assess Environmental Impacts

Finalist Alternatives

- Refine Features of Finalists
- Further Performance Review and Evaluation
- More Detailed Environmental Analysis and Review

Preferred Alternative

- Prepare Draft EIS
- Address DEIS and Public Hearing Comments
- Identify Preferred Alternative
- Develop Mitigation Strategies
- Prepare Final EIS and ROD

Increasing Level of Alternative Refinement and Analysis

PSG/Agency Coordination and Public Involvement

Travel Demand Forecasting

What is Travel Demand Forecasting?

- Process of estimating the number of vehicles or people that will use a specific transportation facility and modes in the future
- A mathematical model (computer based) that will evaluate trip making characteristics and travel choices
- Model validated to existing conditions
- Chicago Metropolitan Agency for Planning (CMAP) maintains the regional travel demand model for the Chicago Metropolitan Region
- The project team is utilizing CMAP data and model inputs to evaluate travel demand and travel performance for the NLSA corridor

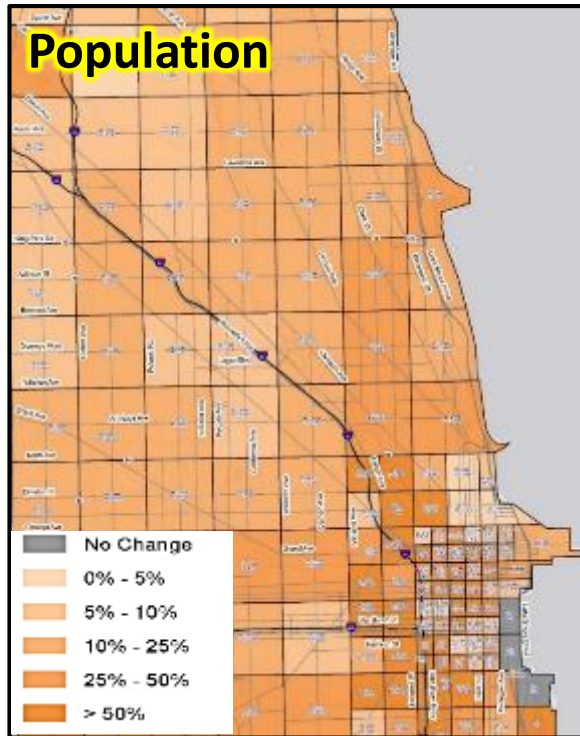

Traffic Modeling

The study area for the North Lake Shore Drive travel demand modeling analysis is bounded by major expressways or natural features.

- *North:* Touhy Avenue
- *West:* I-94 (Edens Expy) and I-90 (Kennedy Expy)
- *South:* I-55 (Stevenson Expy)
- *East:* Lake Michigan

Data Inputs & Assumptions

- Existing and future population and employment projections to estimate future travel behavior and trip patterns
- Planned and funded projects (roadway and transit) included in the CMAP 2040 Conformity Analysis
- Planned and committed supporting improvements such as Bike/Ped, Intelligent Transportation Systems (ITS) and Americans with Disabilities Act (ADA), etc.

Known Results:

- Most of roadway network is oversaturated during peak periods
- Nominal or no-growth in auto traffic within the study area
- Average of 15% - 20% growth in population and employment within the travel demand study area
- Significant attraction and utilization of transit service by the future design year (2040)

Ongoing Analysis:

- How do the alternatives being considered affect travel performance in the study area?
- To what extent would those results influence trip making patterns and mode choice?
- Do the analysis results indicate any major flaws with the alternatives?

Building an Improvement Alternative

- Each improvement alternative represents a **proposed solution** to a **complex set of competing needs** related to:
 - Roadway
 - Transit
 - Bikes and Pedestrians
 - Park land and facilities
 - Environmental and historic resources
 - Shoreline protection
- To craft a potential solution, improvement alternatives are built from the ground up, much like building a home.

Blueprint for an Improvement Alternative

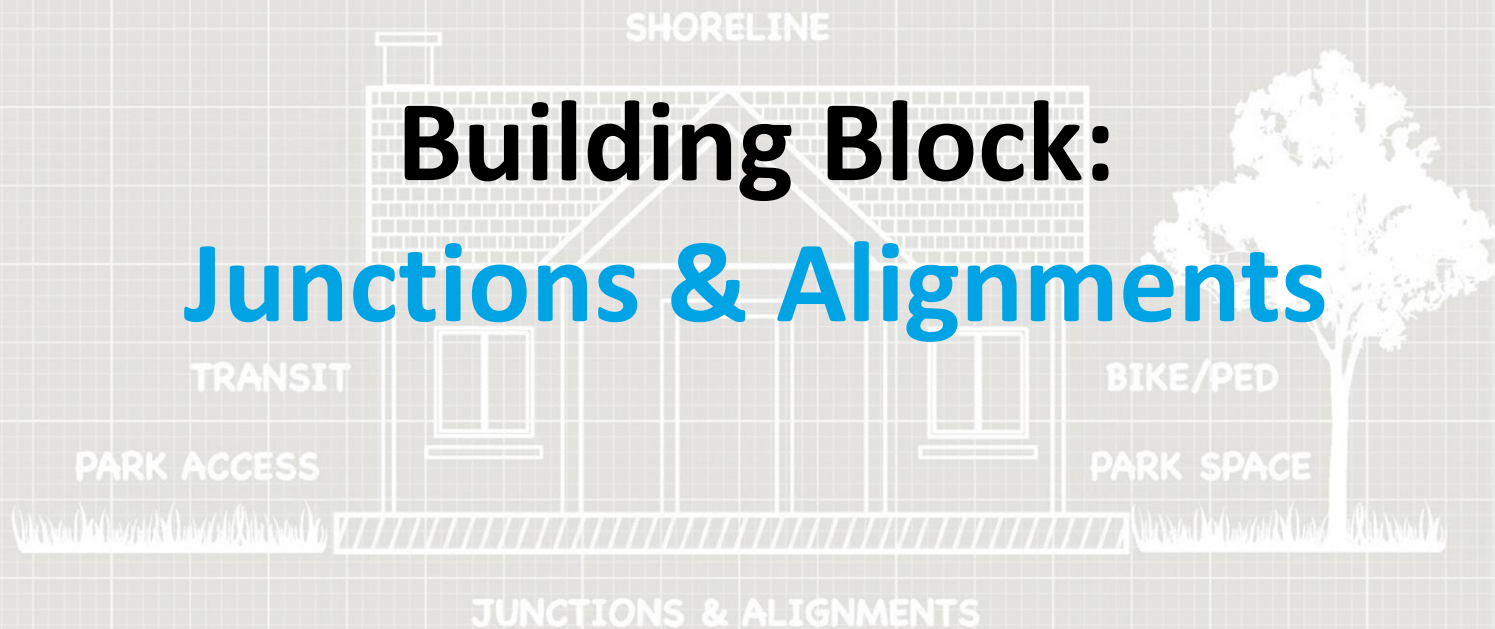

JUNCTIONS & ALIGNMENTS

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Building Block: Junctions & Alignments

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Importance of Junctions

- Confluence of many modes: pedestrian, cyclists, transit & motorists
- Affect safety & mobility for all
- Affect transit service & reliability
- Act as gateways to neighborhoods

Junction Toolbox Considerations

- North Lake Shore Drive is a *Boulevard through a Park*, junctions must reflect this characteristic
- *Grade-Separated* (bridges and ramps) vs. *At-Grade* (traffic signal, for example)
- Junctions may or may not have fourth leg extending the cross-street east of mainline
- One junction type and/or size does not fit all
- Pedestrian, bicycle, and transit accommodations

Toolbox of Junction Treatments

- Partial Cloverleaf
- Conventional Diamond
- Compressed Diamond
- Split Diamond Junction with Frontage Roads
- Diverging Diamond
- Single Point Urban Diamond
- Roundabout (Standard, Bow-Tie and Double)
- Split Junction
- Other Treatments & Elements

Full Cloverleaf Junctions - The “Old Way”

Full Cloverleaf Junctions are not applicable on North Lake Shore Drive.

- *Large Footprint*
- *Not Pedestrian/ Cyclist Friendly*
- *Poor Operation (Weaving, etc.)*

Chicago, c. 1941

Partial Cloverleaf Junction

Partial Cloverleaf Junction

Conventional Diamond Junction

Conventional Diamond Junction

Compressed Diamond Junction

Compressed Diamond Junction

Belmont Avenue

Embankments

Retaining Walls

North Lake Shore Drive

Chicago/Lincoln Park

Split Junction with Frontage Roads

At-Grade Overpasses of Mainline at Select Cross-Streets; Peds/Bikes Also Cross Here

At-Grade One-Way Frontage Roads

Mainline NLSD Depressed Below Grade

Split Junction with Frontage Roads

Half Diverging Diamond Junction

Half Diverging Diamond Junction

Jessup, Maryland

Single Point Diamond Junction

Single Point Diamond Junction

Columbus, Indiana

Roundabout Junction

**Pedestrian Underpass
is Preferable**

**Pedestrians Need to Cross
Free-Flow Traffic Stream if At-
Grade Crossing is Desired
(Law: Vehicles Yield to Peds)**

No Traffic Signals

**Two Bridges, Or One
Large Land Bridge**

Roundabout Junction

Latham, New York

Bow-Tie Roundabout Junction

Bow-Tie Roundabout Junction

Carmel, Indiana

Double Roundabout Junction

**U-Turn/Bus Turn-Around
at Ramp Intersection**

**Diamond Junction, But
With Roundabouts at
Ramp Intersections**

Double Roundabout Junction

Jessup, Maryland

Split Junction

Split Junction

Braided Ramps

Traditional Weaving Area

Braided Ramps

Braided Ramps

Nashville, Tennessee

Other Junction Treatments

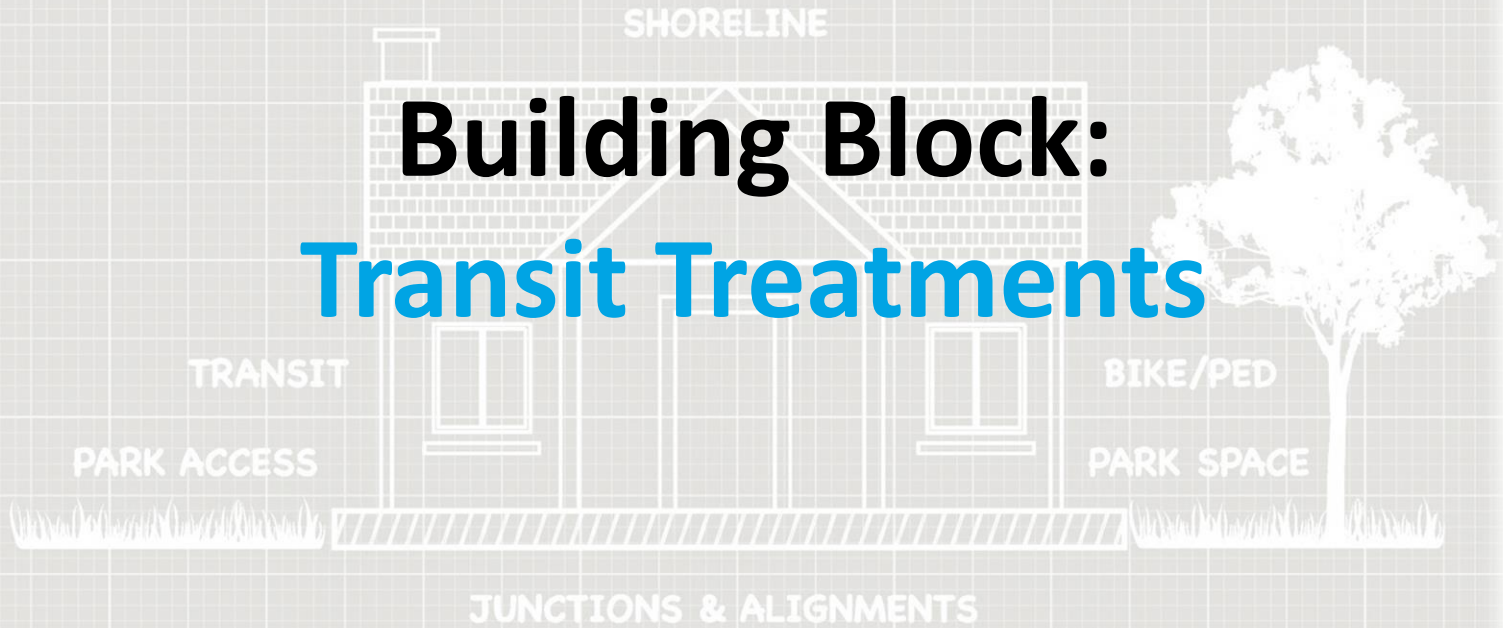

- At-Grade Junctions (Traffic Signalized Intersection)
- Relocated or Removed Junction
- New Junctions to Better Distribute Local Access
- Others

Selection of Junction Treatments

- Not One-Size-Fits-All
- Designs dependent on:
 - Traffic operations
 - Right-of-way or physical constraints
 - Non-motorized travel within corridor
 - Transit facilities
- Junction type and footprint is a critical element that affects the corridor alignment
- Continue development and analysis of alternatives at individual junctions

Building Block: Transit Treatments

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Transit Ridership Facts

- Approximately **70,000** transit trips on 9 bus routes every weekday
- Transit trips account for approximately **1 in 5** of all passenger trips on NLSD
- Most transit trips take place in peak periods when speed and reliability experience the greatest variability

Transit: Dedicated Lane

I-35 BRT (Minneapolis, MN)

Planned Van Ness BRT (San Francisco, CA)

Trans Milenio BRT (Bogotá, Columbia)

Transit: Bus-on-Shoulder

Bus on Right Shoulder (North Carolina)

PACE Bus on Left Shoulder (Chicago)

Transit: Managed Lanes

I-35 Multi-Purpose Lane (Minneapolis, MN)

High Occupancy Vehicle (HOV) Lanes (King County, WA)

Transit: Light Rail

Lynx (Charlotte, SC)

Metro (Minneapolis, MN)

Transit: Queue Jumps

At Cross-Street or Ramp Intersections

Transit: Queue Jumps

To/From Mainline

Transit: Ramp Meters

Arizona

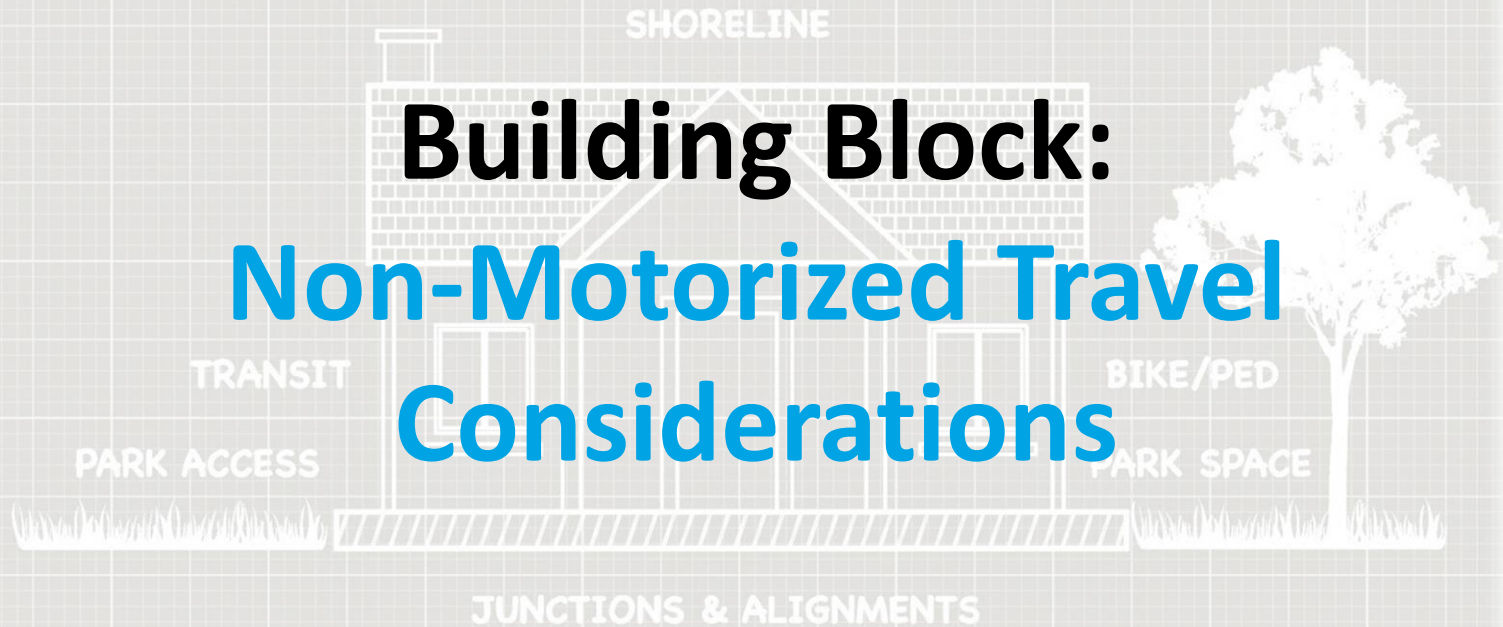

Milwaukee, WI

Transit: Traffic Signal Priority (TSP)

Building Block: Non-Motorized Travel Considerations

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Trail Usage

Saturday in July

- Volumes through each of the Lakefront Trail access points range from 1,800 users per day at the north end to nearly 22,000 users per day at Oak Street.
- Some Lakefront Trail segments between Oak Street and North Avenue can carry over 31,000 users on a Saturday in the summer.

Current Trail Access Points

- There are currently **22 access points** to the Lakefront Trail across North Lake Shore Drive within the project study limits. These include:
 - 9 cross-street underpass locations
 - 12 tunnels or underpasses for exclusive non-motorized use
 - The Passerelle overpass

Non-Motorized Travel Opportunities

All Initial Alternatives will include the following non-motorized travel features where practicable:

- Add new Lakefront Trail/Lincoln Park access facilities over or under mainline Lake Shore Drive
- Increase access frequency and spacing along corridor

Non-Motorized Travel Opportunities

All Initial Alternatives will include the following non-motorized travel features where practicable:

- Reconstruct and widen pedestrian tunnels to:
 - Meet non-motorized travel demands
 - Provide separate lanes for bikes and pedestrians
 - Satisfy ADA accessibility standards

“OLD”

“NEW”

Non-Motorized Travel Opportunities

All Initial Alternatives will include the following non-motorized travel features where practicable:

- Provide separate facilities for bikes and pedestrians on the Lakefront Trail
- Reconstruct Inner Drive to accommodate all users in accordance with applicable complete streets standards/guidelines.

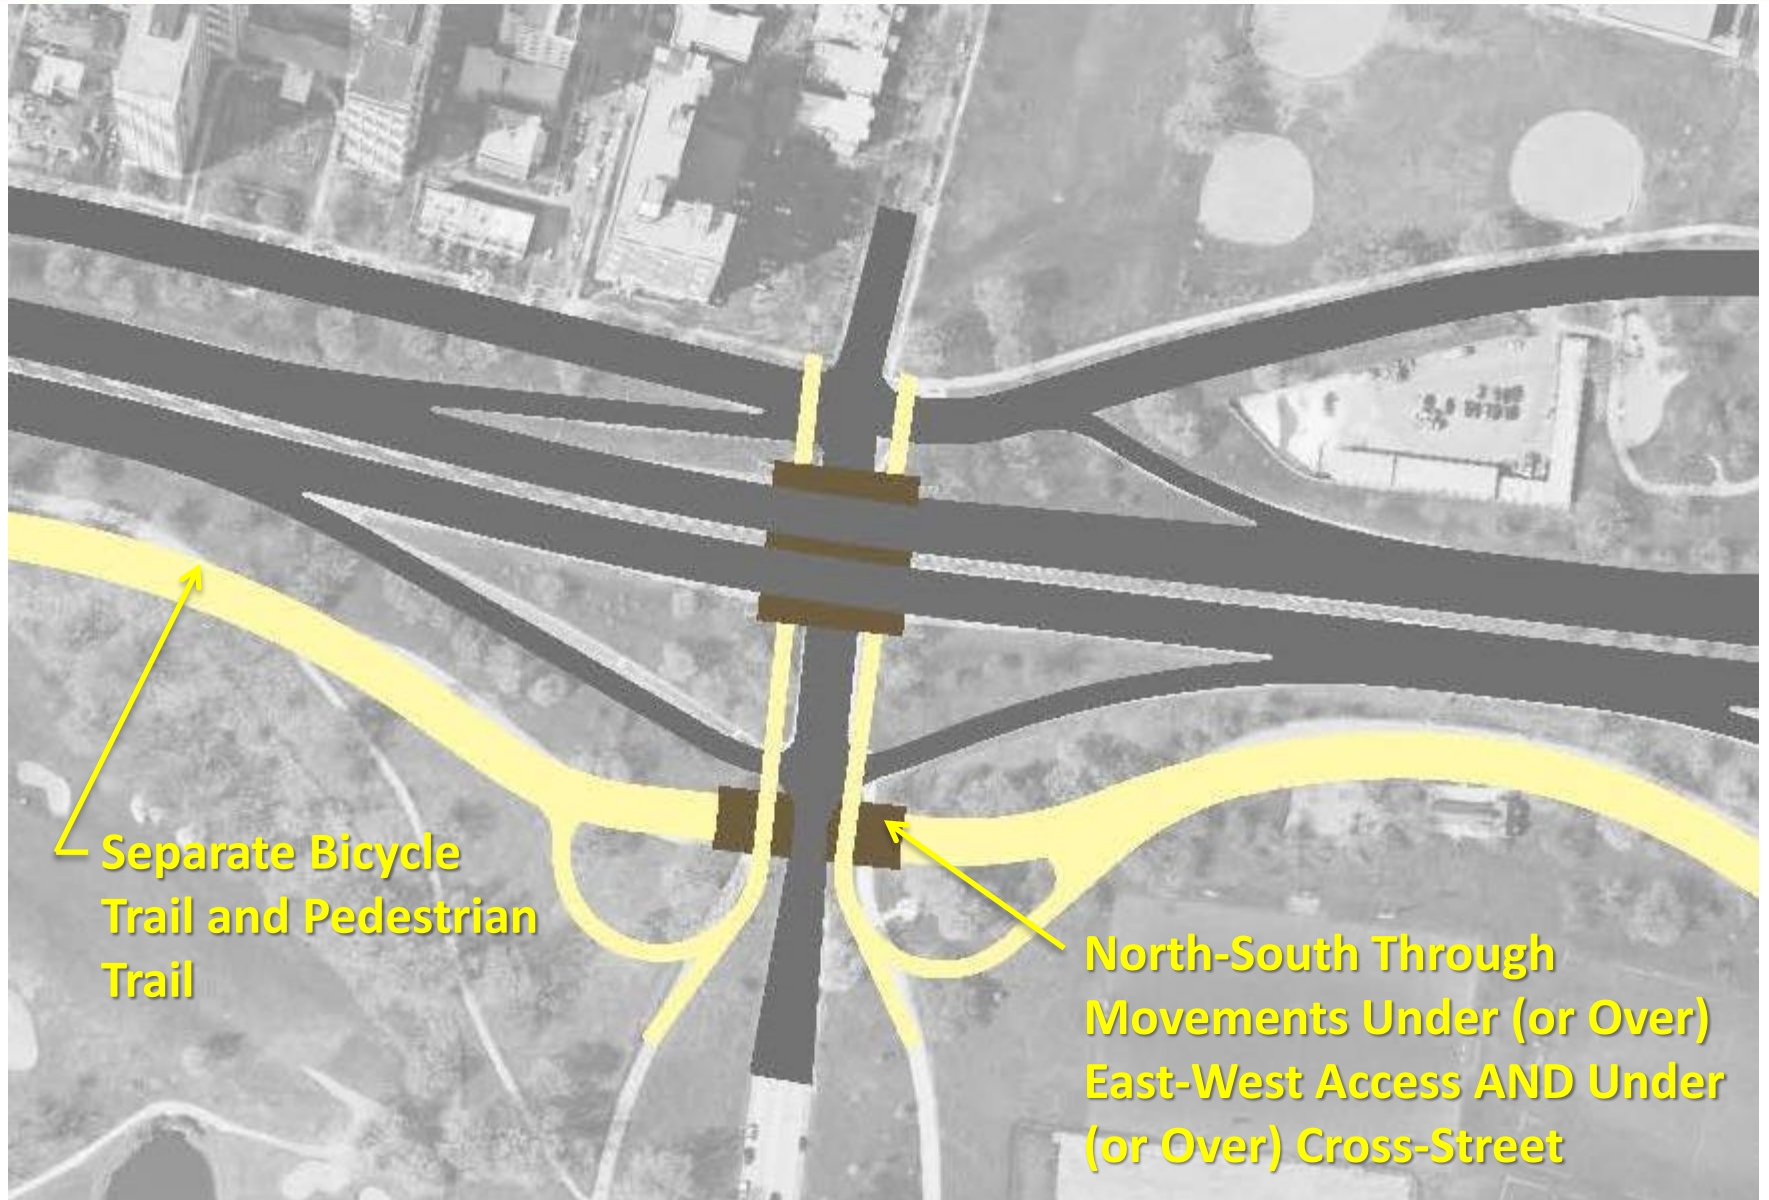

Non-Motorized Travel Opportunities

All Initial Alternatives will include the following non-motorized travel features where practicable:

- Build overpasses or underpasses to carry the Lakefront Trail over or under *cross-streets*.
- Build overpasses or underpasses to carry the mainline Lakefront Trail bike lanes over or under the *Lakefront Trail access points*.

Lakefront Trail Considerations

Questions?

10 Minute Break

Building Block: Shoreline Considerations

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Shoreline Protection

Where water meets land, dynamic environmental forces are hard at work

- Wind, Waves, Water Levels & Currents
- Over-topping & Flooding
- Erosion & Damage to Site Improvements & Nearshore Infrastructure

Shoreline Protection Overview

- Many forms of protection (natural & built)
- Withstand environmental forces
- Create safe, stable, & functional shorelines
- Complex design process

Shoreline Protection Treatments

Various Treatments to consider on this project... “toolbox”

- Beaches
- Stone Revetments
- Stepped Concrete Revetments
- Vertical Steel Sheet Pile Walls
- Offshore Islands
- Breakwaters
- Submerged Reefs

Shoreline Protection Treatments

Chicago Shoreline Protection Projects

Recent Shoreline Protection Projects

- Various shoreline project types:
 - Vertical Steel Sheet Pile Wall
 - Stepped Concrete Revetment
 - Stacked Stone Revetment
 - Beach Nourishment/ Stabilization
 - Breakwaters

RECENT SHORELINE PROTECTION PROJECTS

SHORELINE PROTECTION IMPROVEMENT OPPORTUNITY AREA

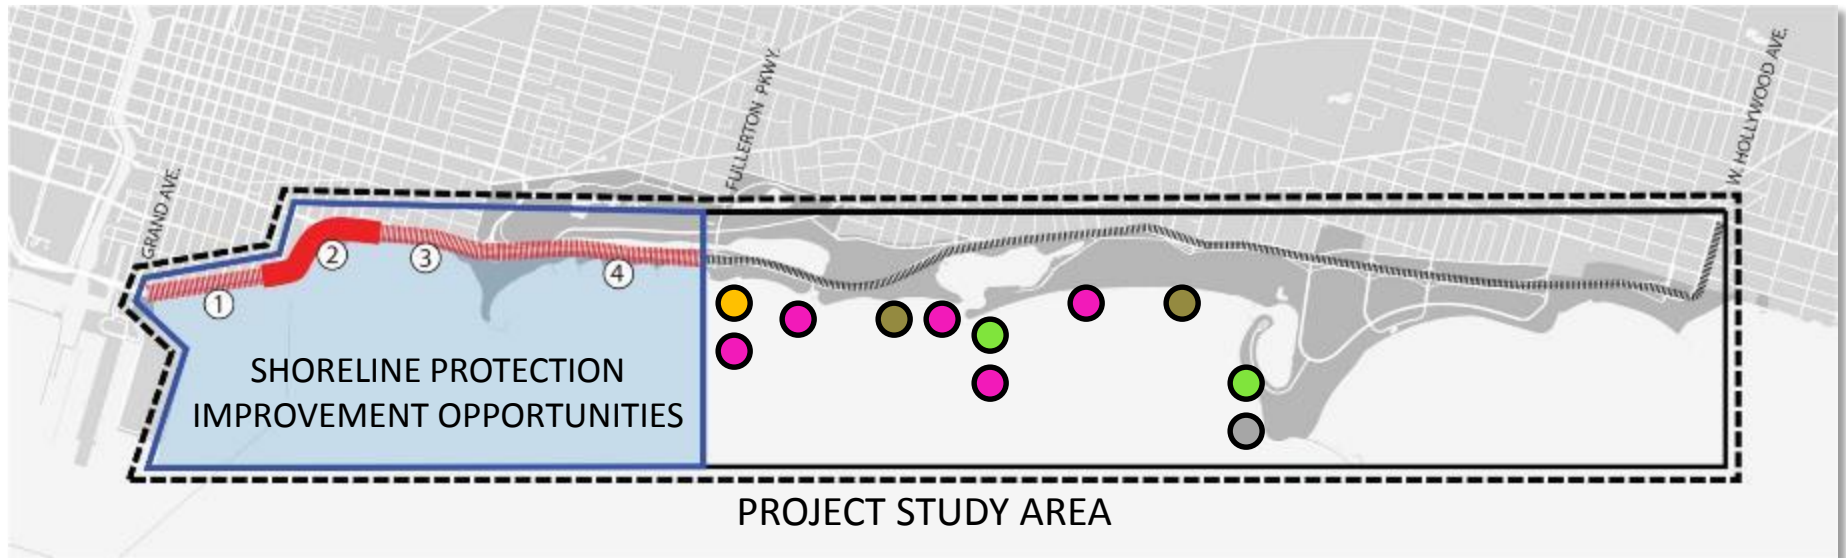

Chicago Shoreline Analysis

Shoreline Protection Improvement Opportunities

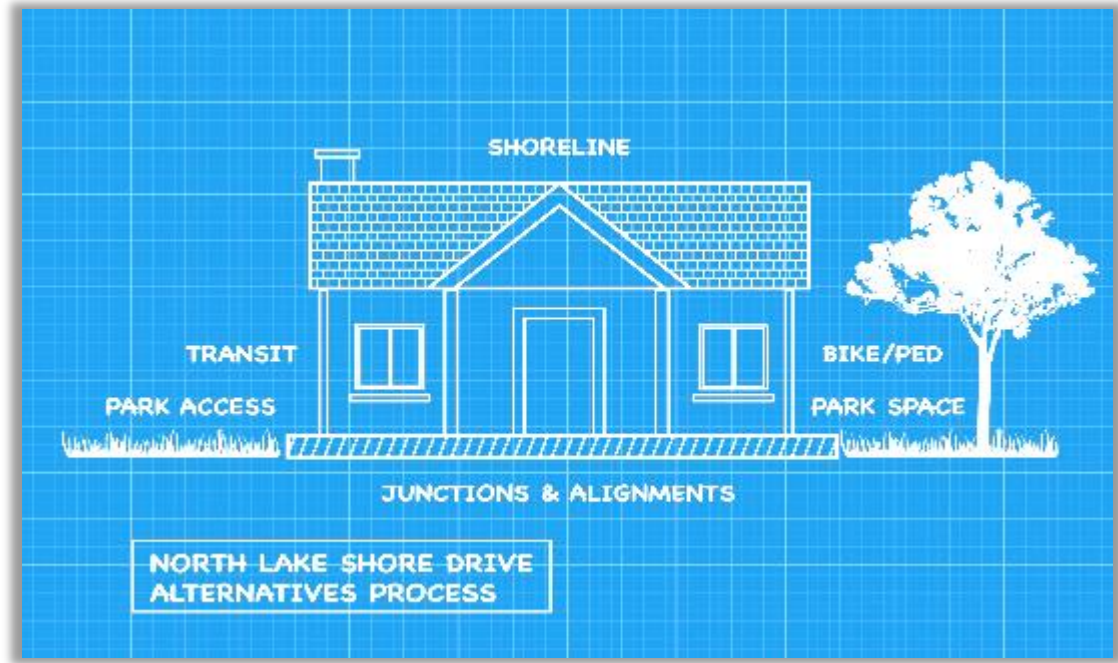

Grand Avenue to Fullerton Parkway

1. Chicago Avenue (intersection improvements)
2. Oak Street Beach (horizontal alignment improvements)
3. Oak Street to North Avenue (minimize overtopping & flooding)
4. North Avenue Beach (alignment and beach expansion improvements)

Key Design Challenges

- Flooding
- Safety
- Site Improvements

Wave Overtopping and Flooding

October 31, 2014

September 30, 2011

September, 1987

Shore Protection Summary

- Water Level & Waves
- Revetment Width
- Crest Elevation
- Setback

East Chicago Avenue: Stepped Concrete Revetment

Wave Height
 65% - 100% x water depth
 70% above SWL – 30% below

Junction Toolbox Example:

Chicago Avenue Junction Area

(Grand Avenue to Oak Street Curve)

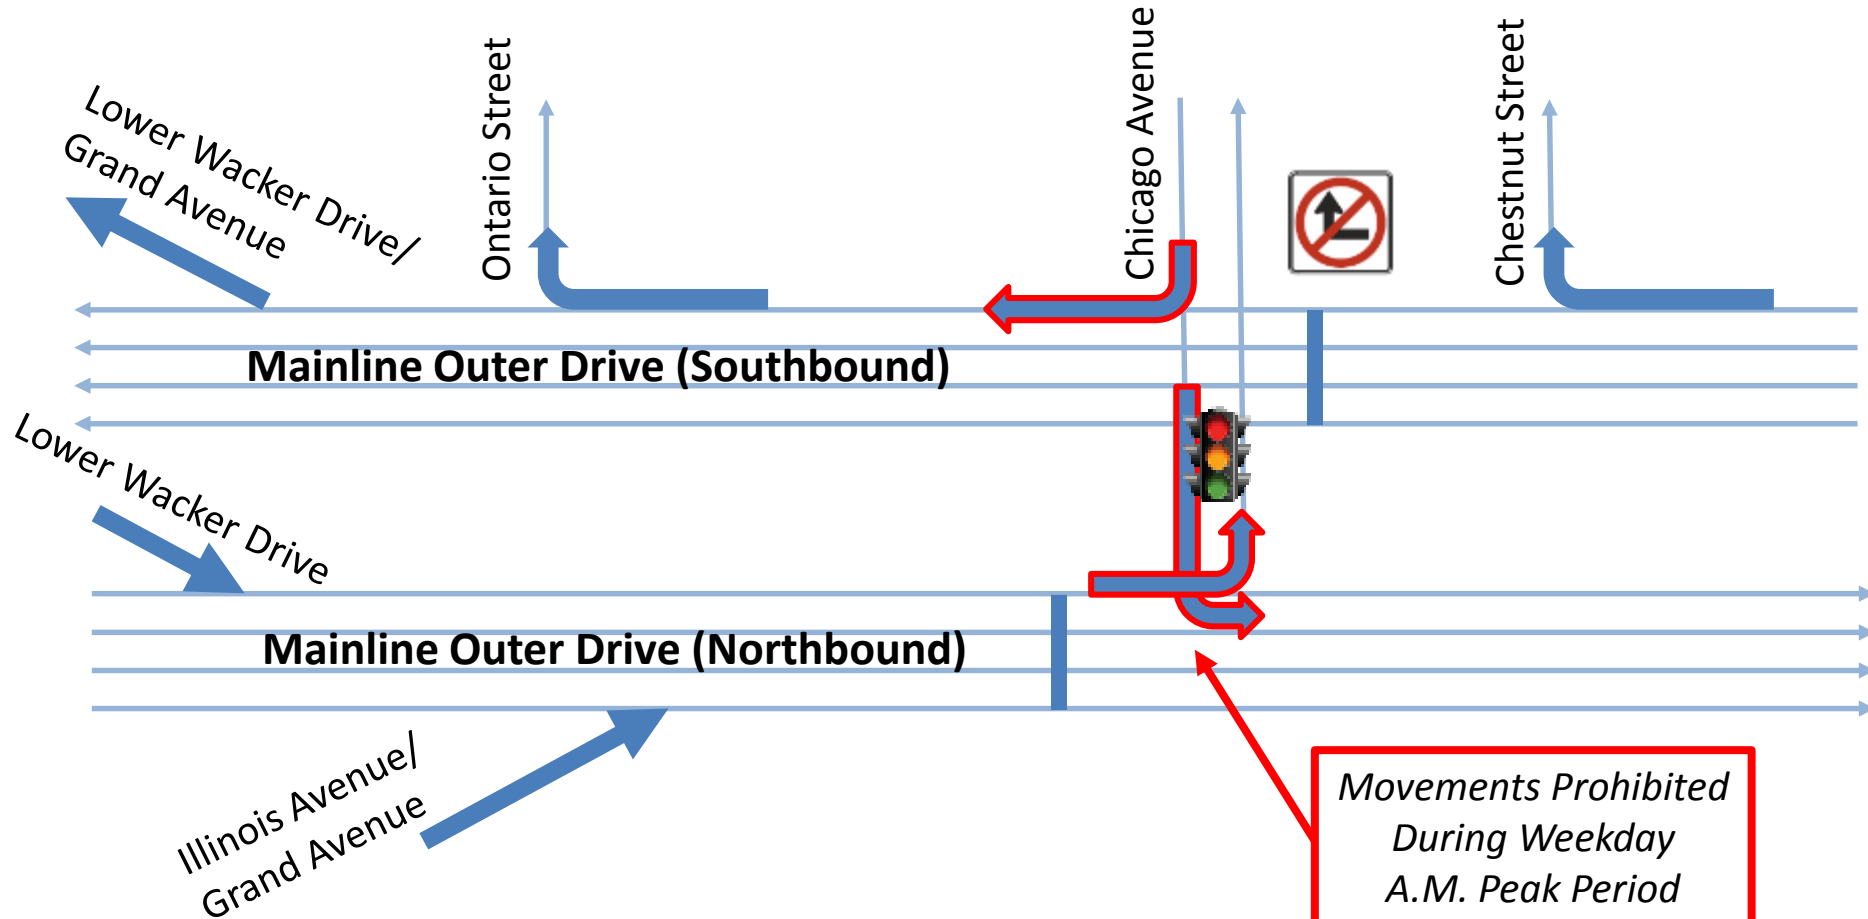

Deficiencies & Needs

- Only signalized Outer Drive intersection
- Severe daily congestion along Outer Drive and Chicago Avenue
- Restricted traffic movements
- Traffic conflicts with northbound CTA bus access from Wacker Drive
- Long desired improvements to lakefront access and the Lakefront Trail
- Lakefront Trail and pedestrian tunnel do not meet accessibility guidelines and are prone to flooding

Traffic Movements to/from NLSD

Environmental Resources Map (ERM)

- Identifies Environmental and Historic Resources within Project Limits
- Establishes constraints to improvement alternatives

Environmental Resources at Chicago Avenue

Relatively Few Environmental Resources/Constraints

Historic Resources

Park Resources

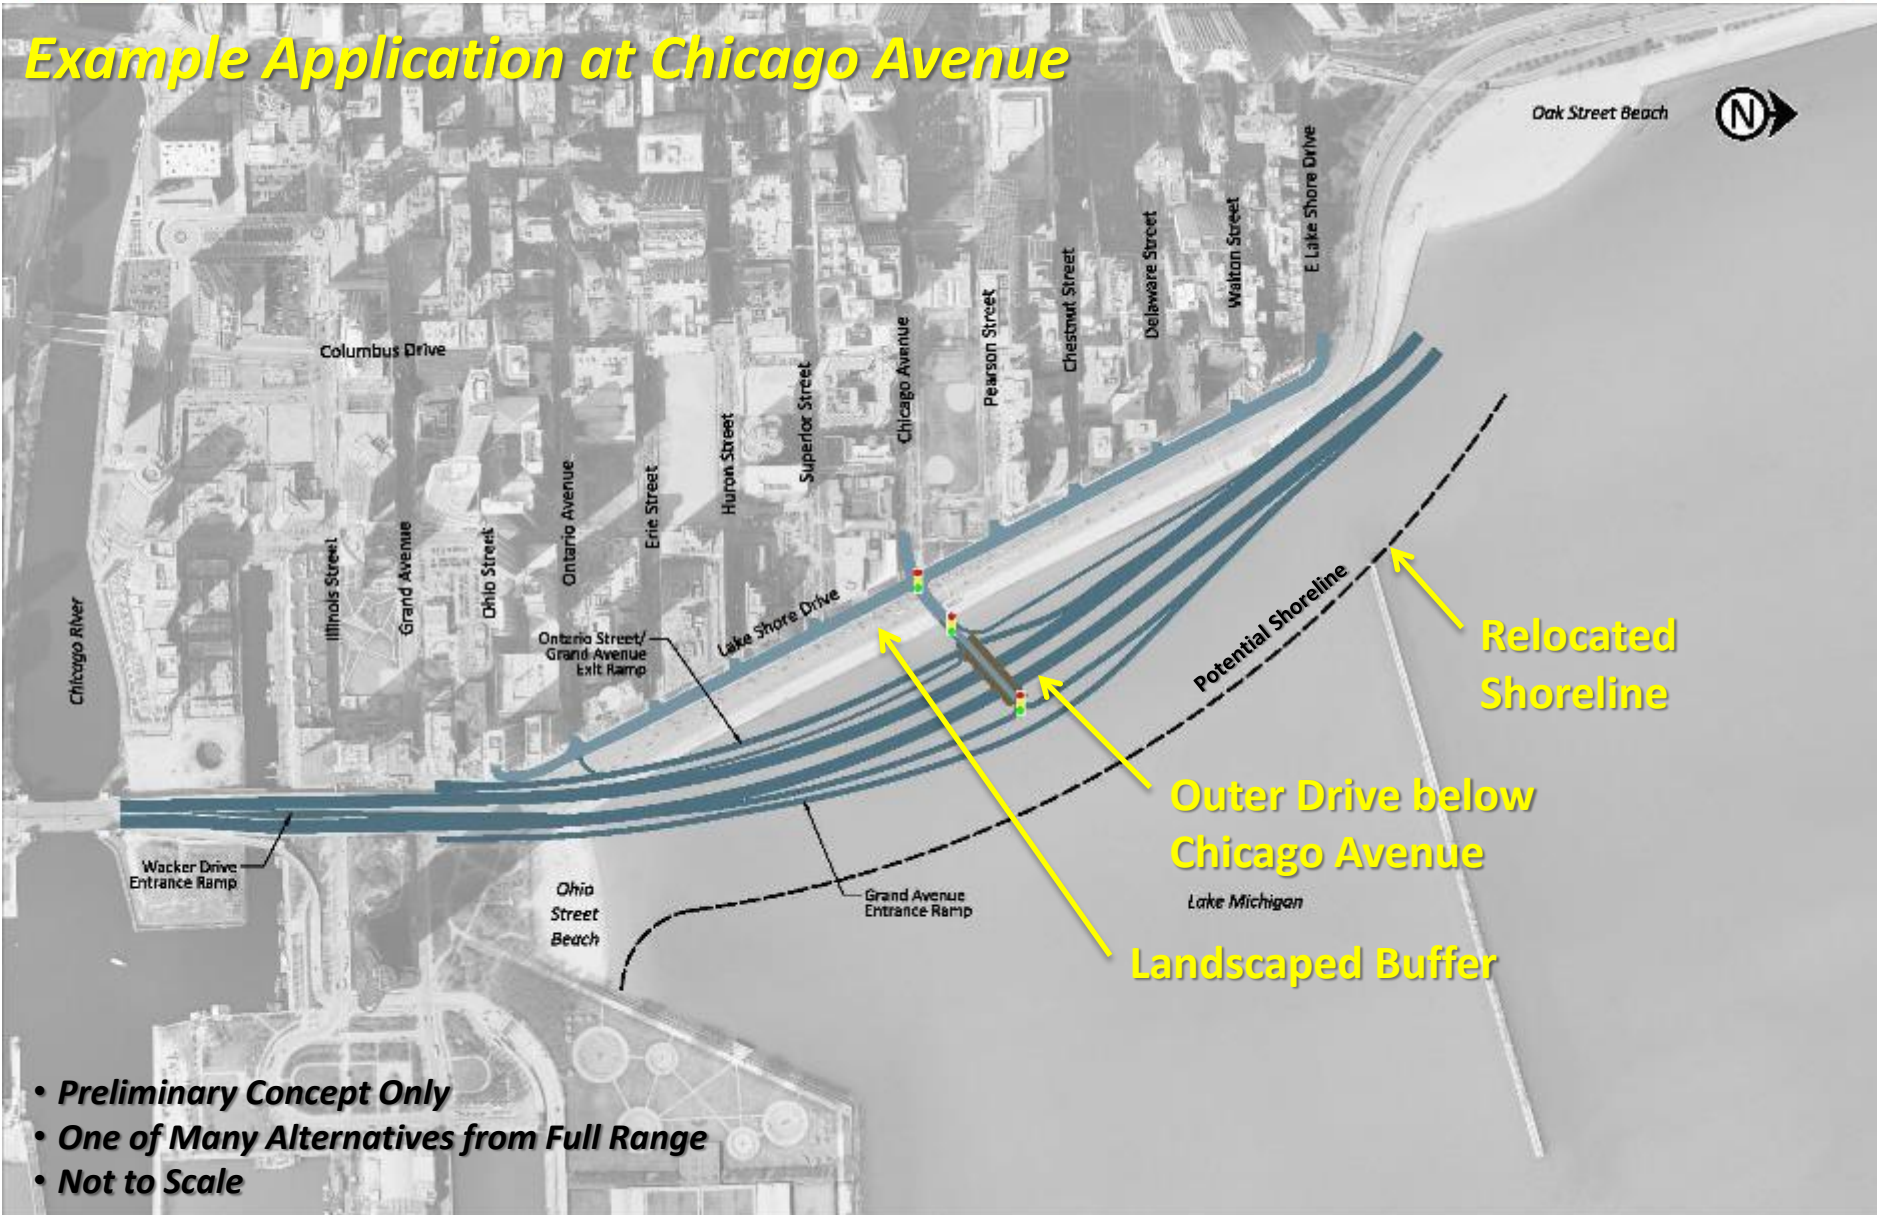

Chicago Avenue Junction Treatments

- Of the alternative treatments shown in the “Junction Toolbox”, the following may be considered at the Chicago Avenue Junction Area:
 - Compressed Diamond Junction
 - Split Junction with Frontage Roads
 - Half Diverging Diamond Junction
 - Bow-Tie Roundabout Junction
 - At-Grade Intersection

Compressed Diamond Junction

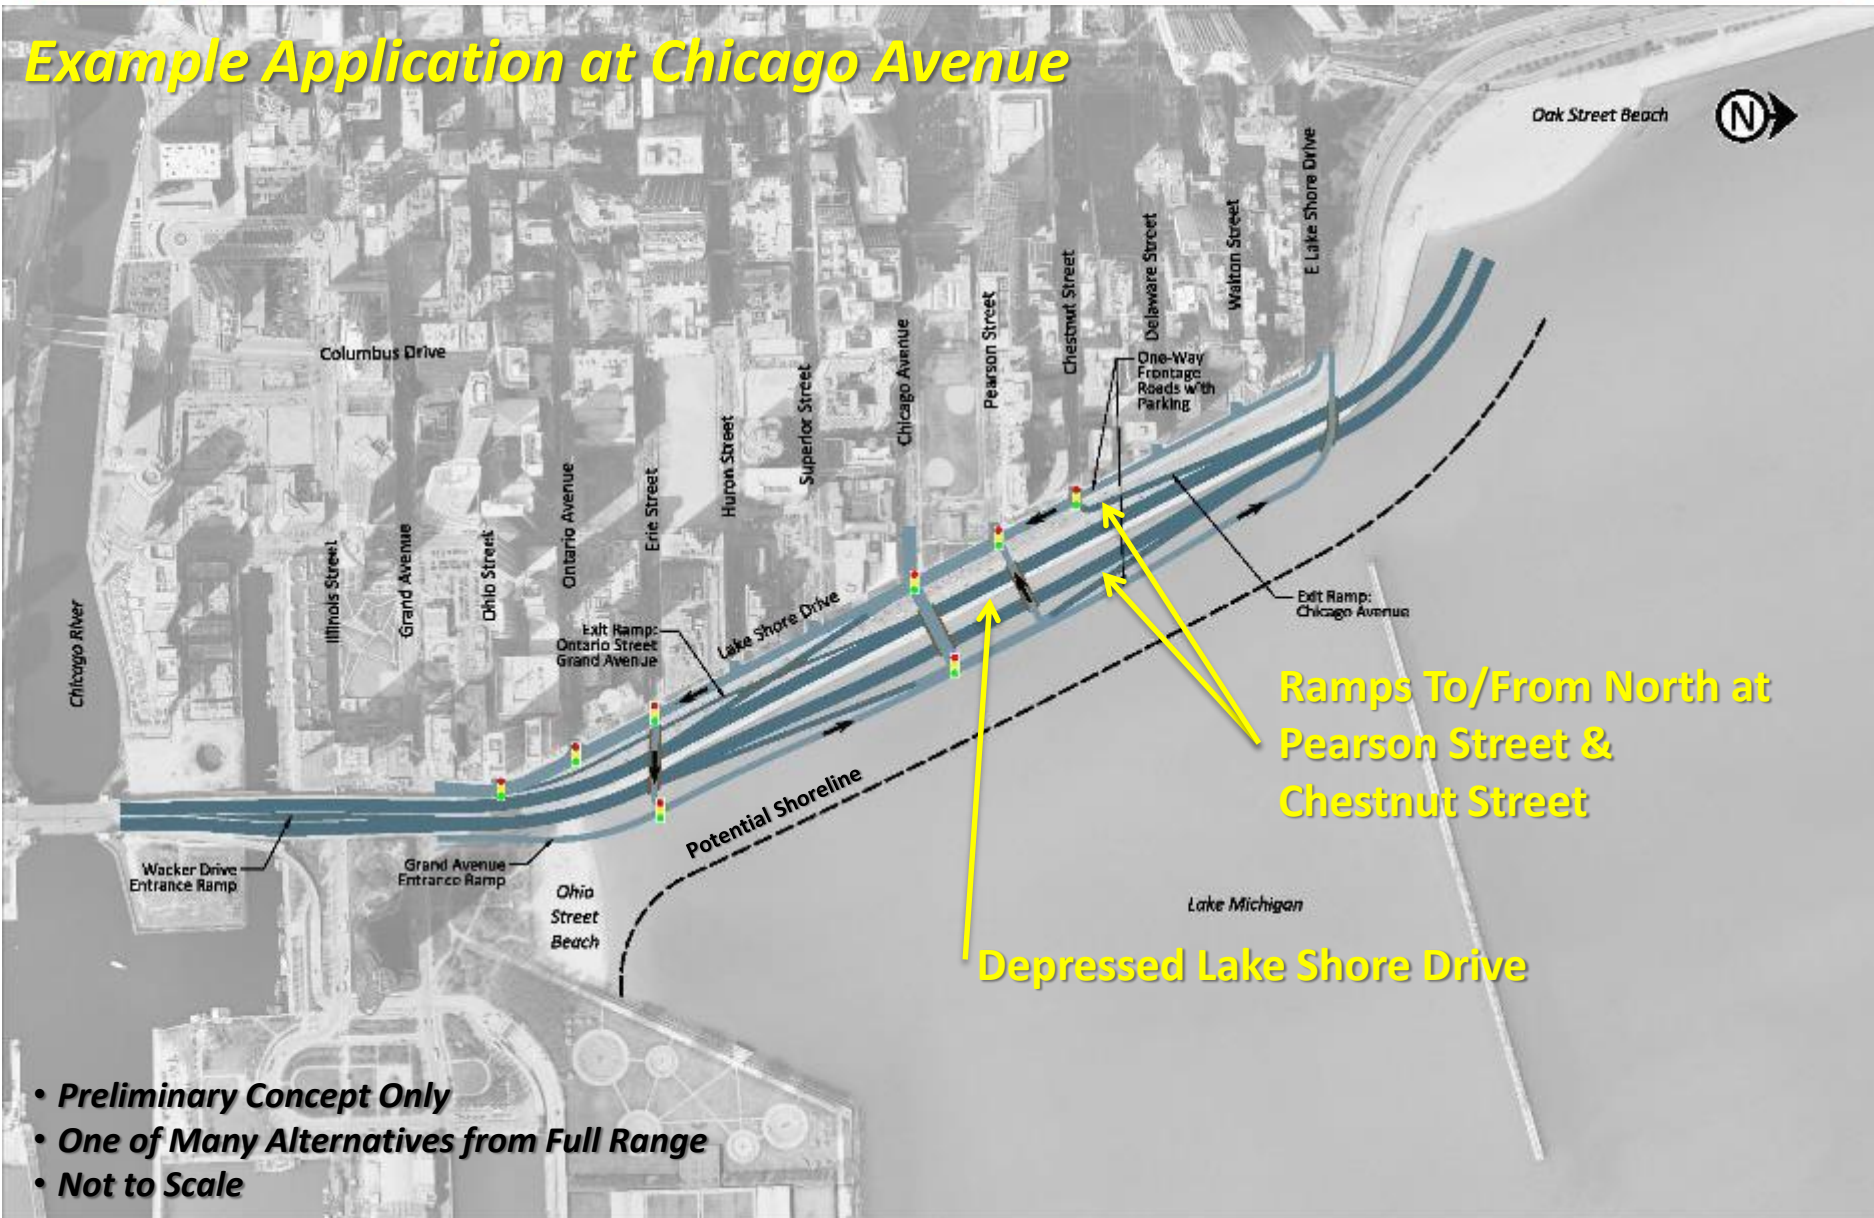

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Split Junction with Frontage Roads

Example Application at Chicago Avenue

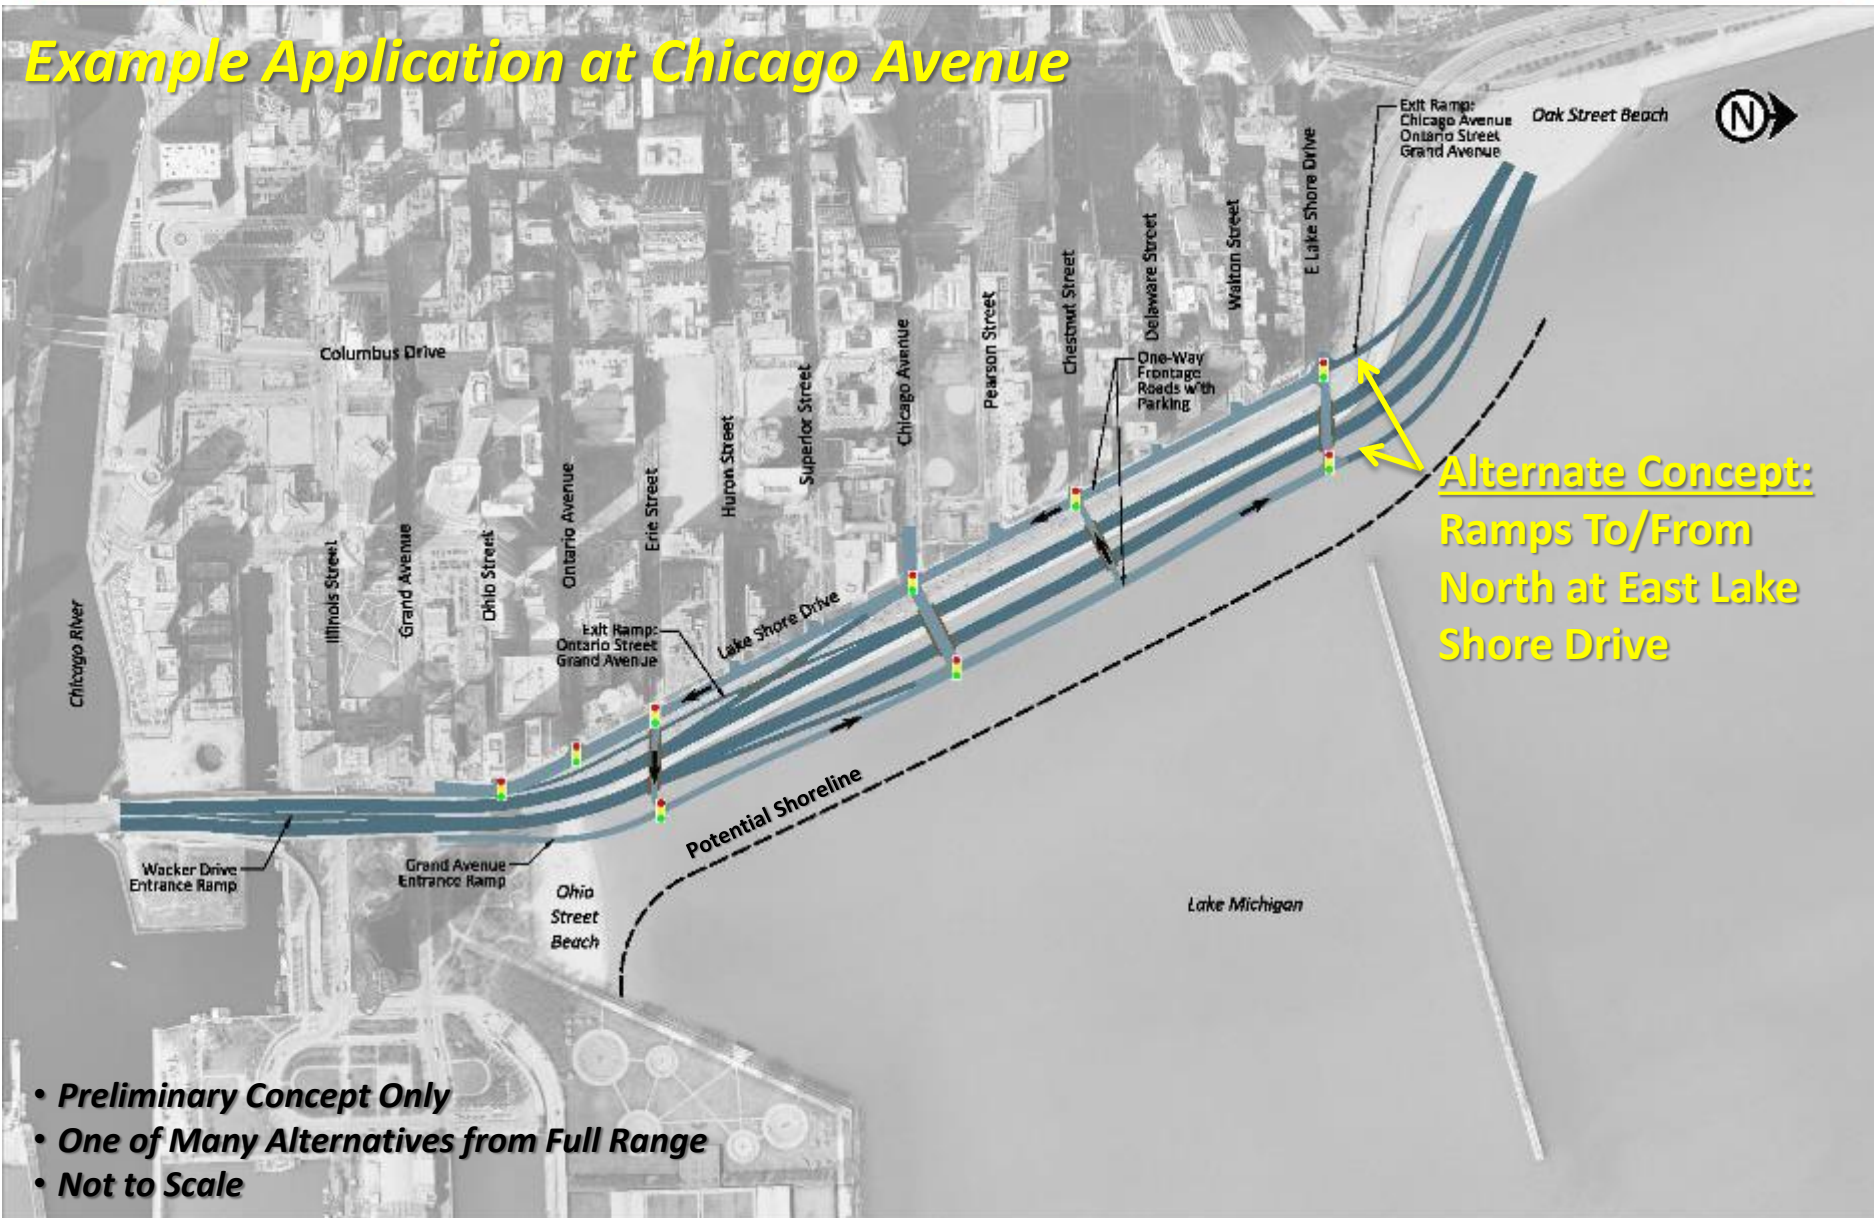

Ramps To/From North at
Pearson Street &
Chestnut Street

Depressed Lake Shore Drive

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Split Junction with Frontage Roads

Example Application at Chicago Avenue

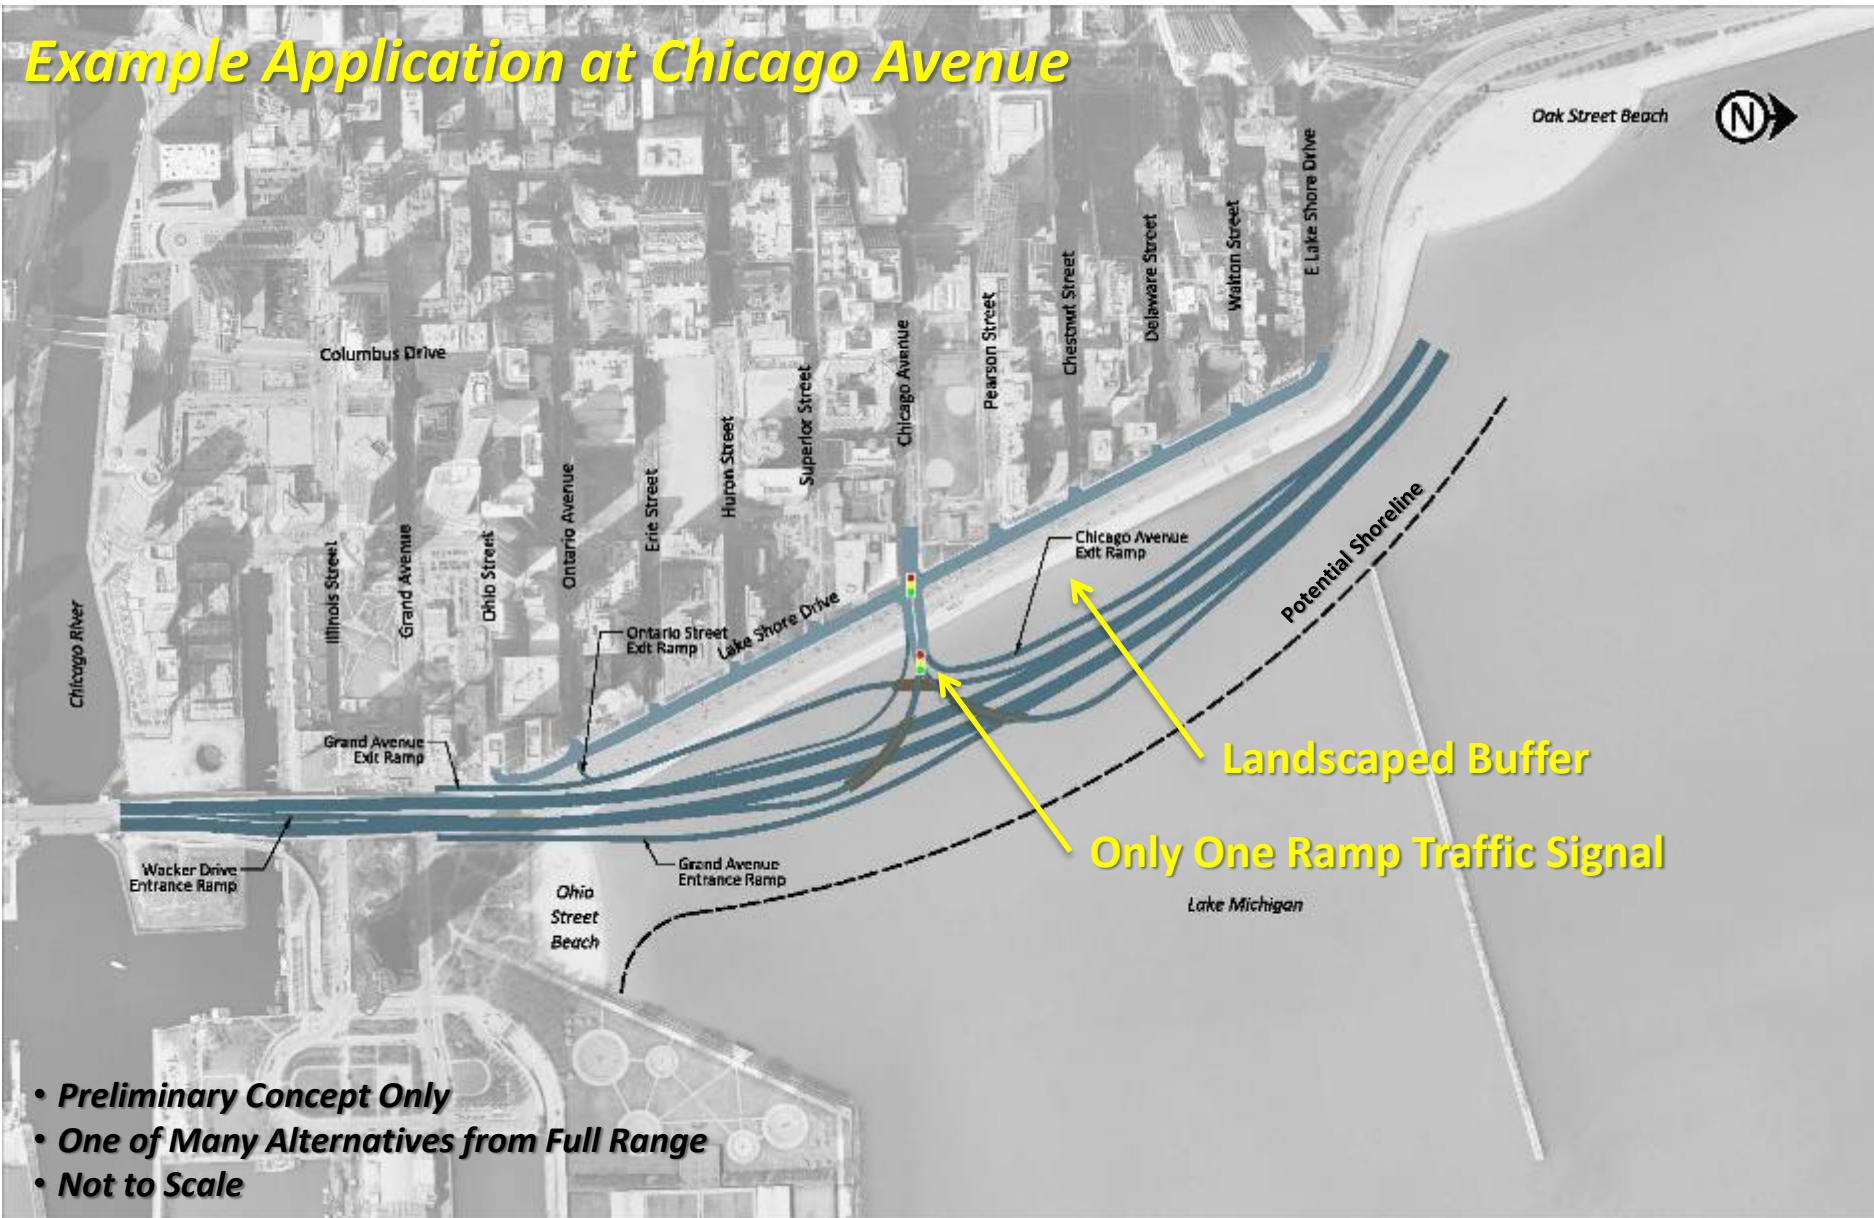

**Alternate Concept:
Ramps To/From
North at East Lake
Shore Drive**

- **Preliminary Concept Only**
- **One of Many Alternatives from Full Range**
- **Not to Scale**

Half Diverging Diamond Junction

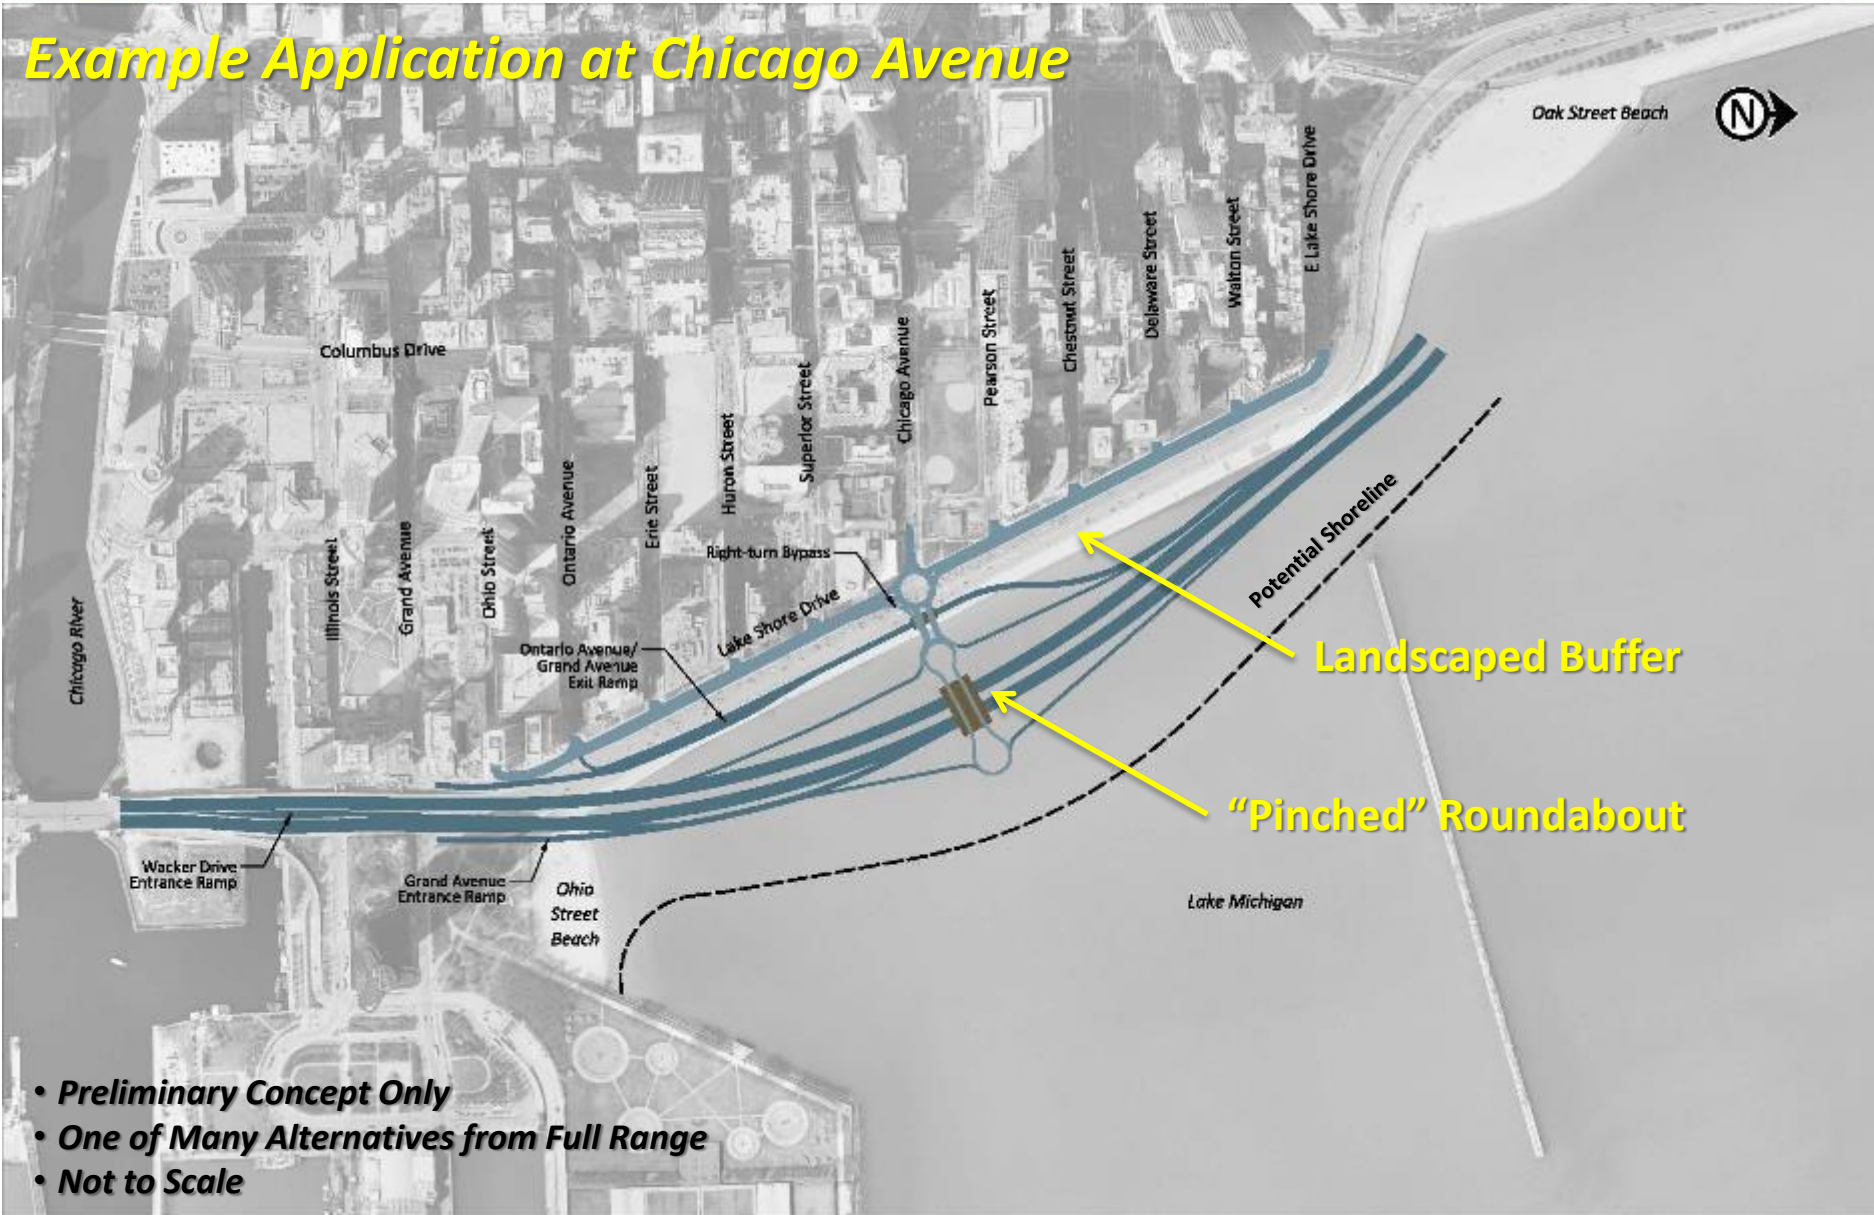

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Bow-Tie Roundabout Junction

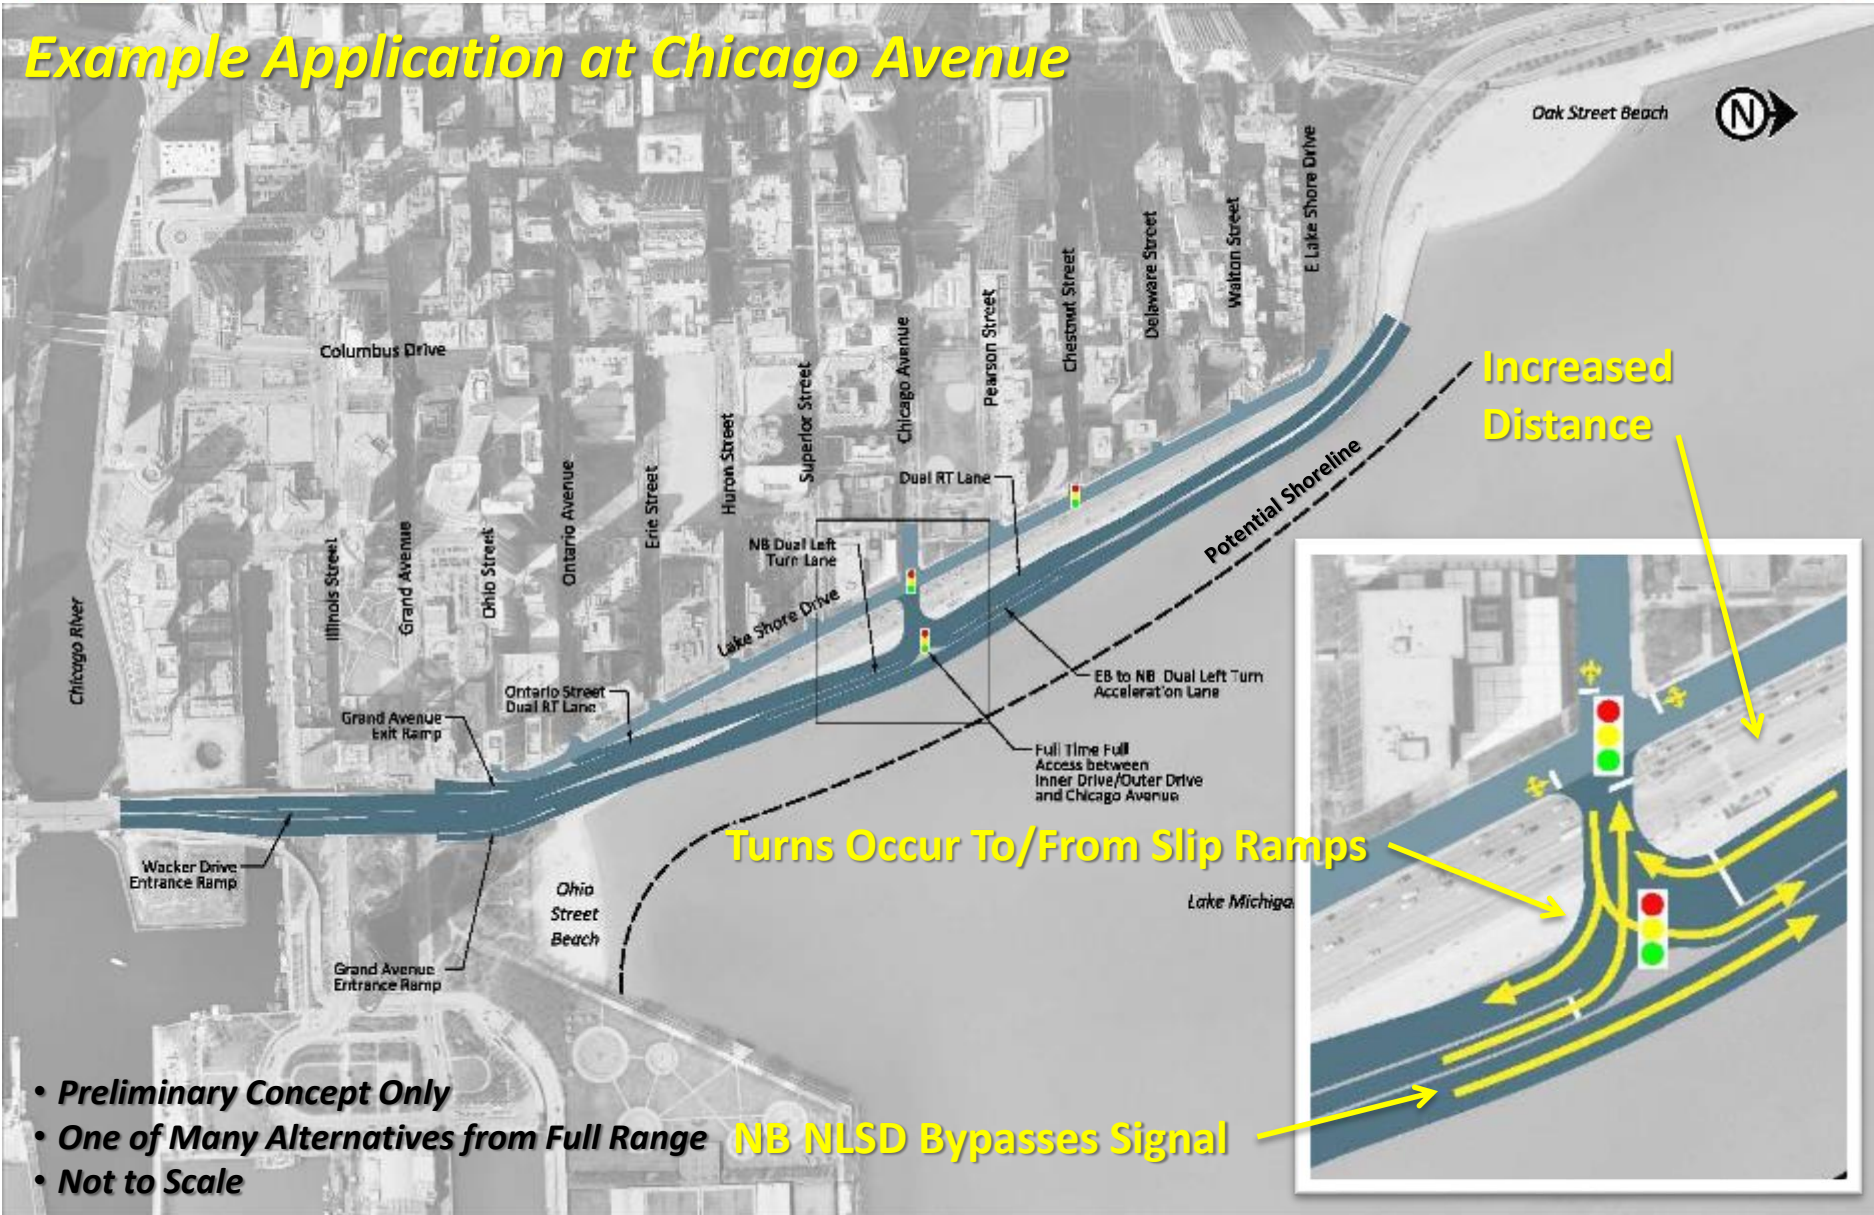

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

At-Grade Intersection

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range NB NLSD Bypasses Signal
- Not to Scale

Transit and Non-Motorized Travel Building Block Examples: *Chicago Avenue Junction Area* (Grand Avenue to Oak Street Curve)

PARK ACCESS

PARK SPACE

JUNCTIONS & ALIGNMENTS

NORTH LAKE SHORE DRIVE
ALTERNATIVES PROCESS

Transit – Right Side

Example Application at Chicago Avenue

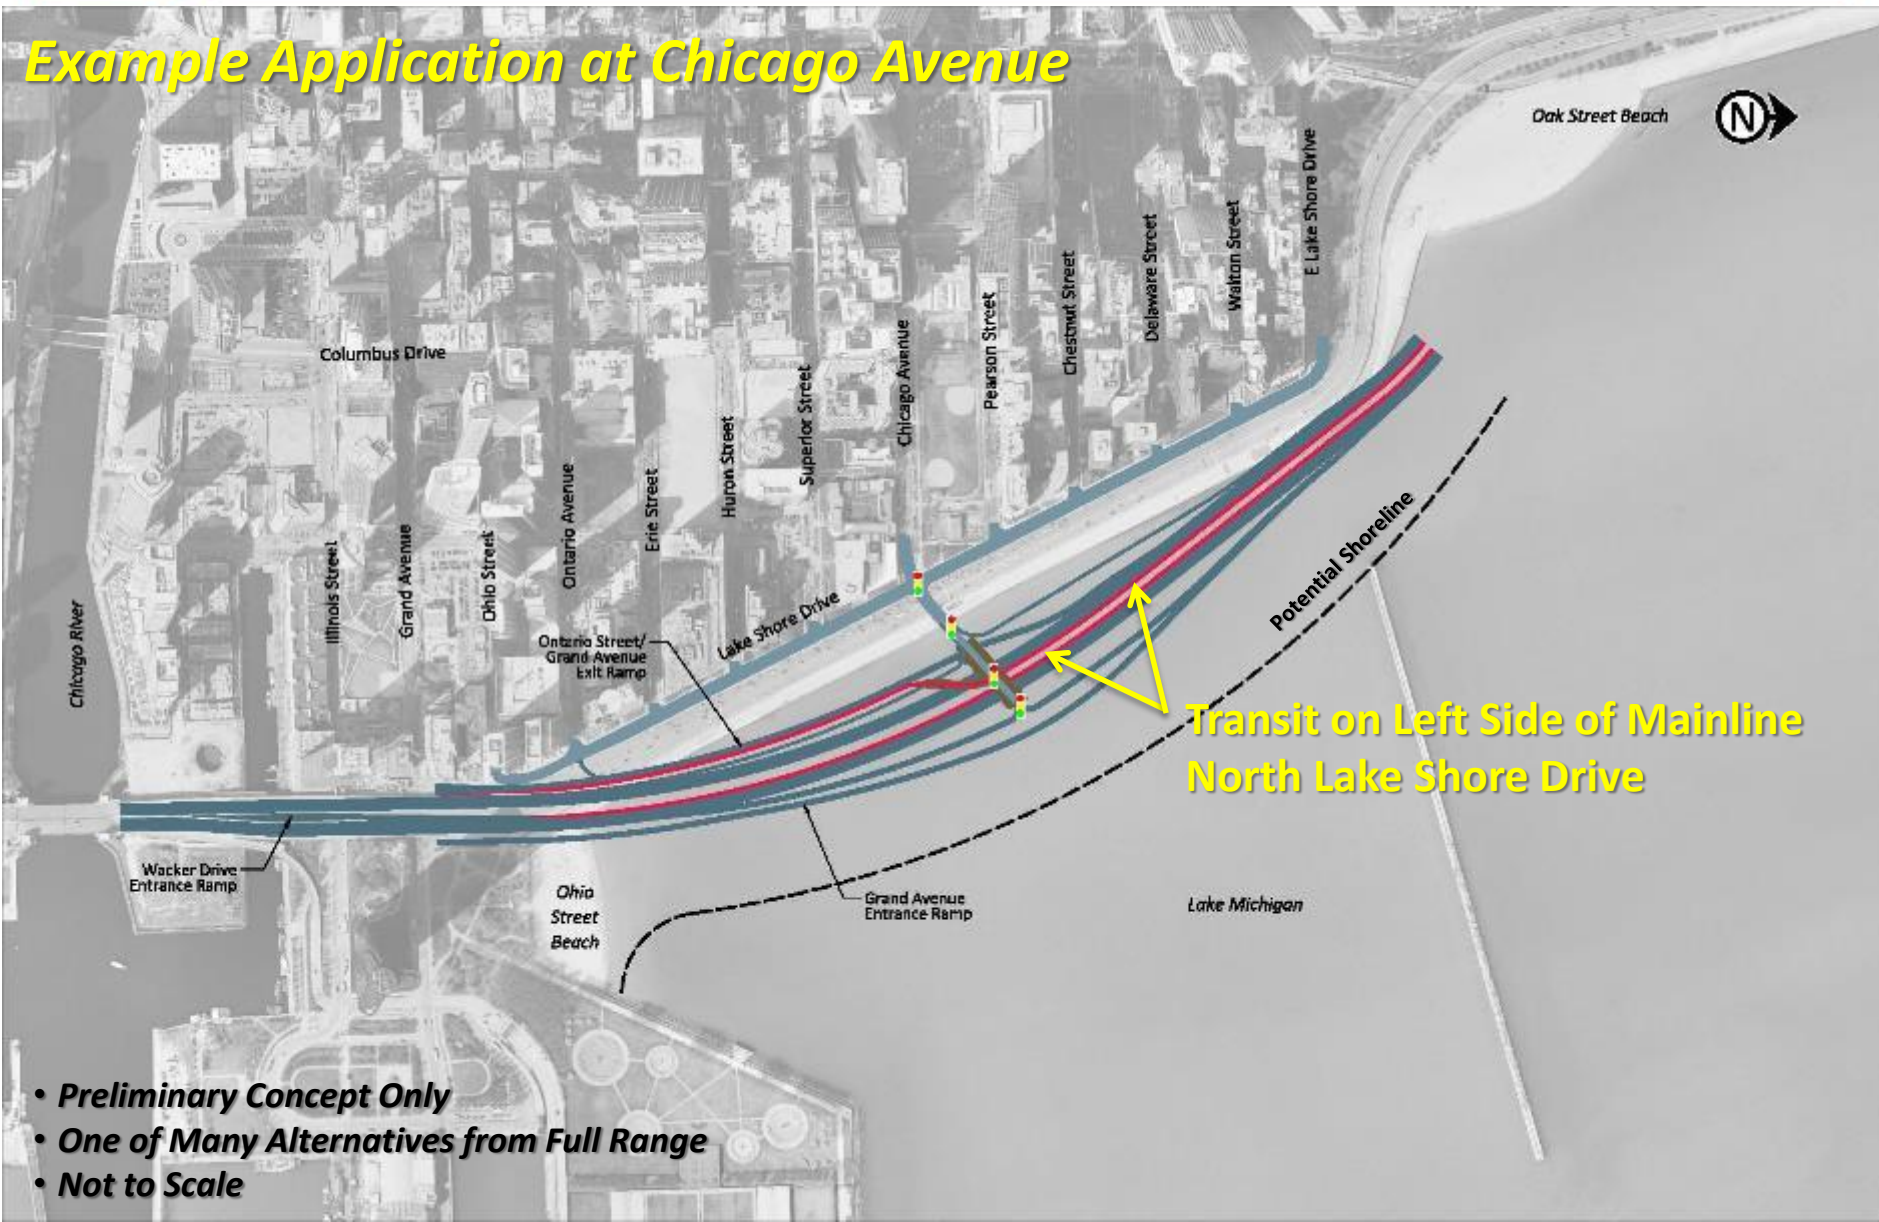

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Transit – Left Side

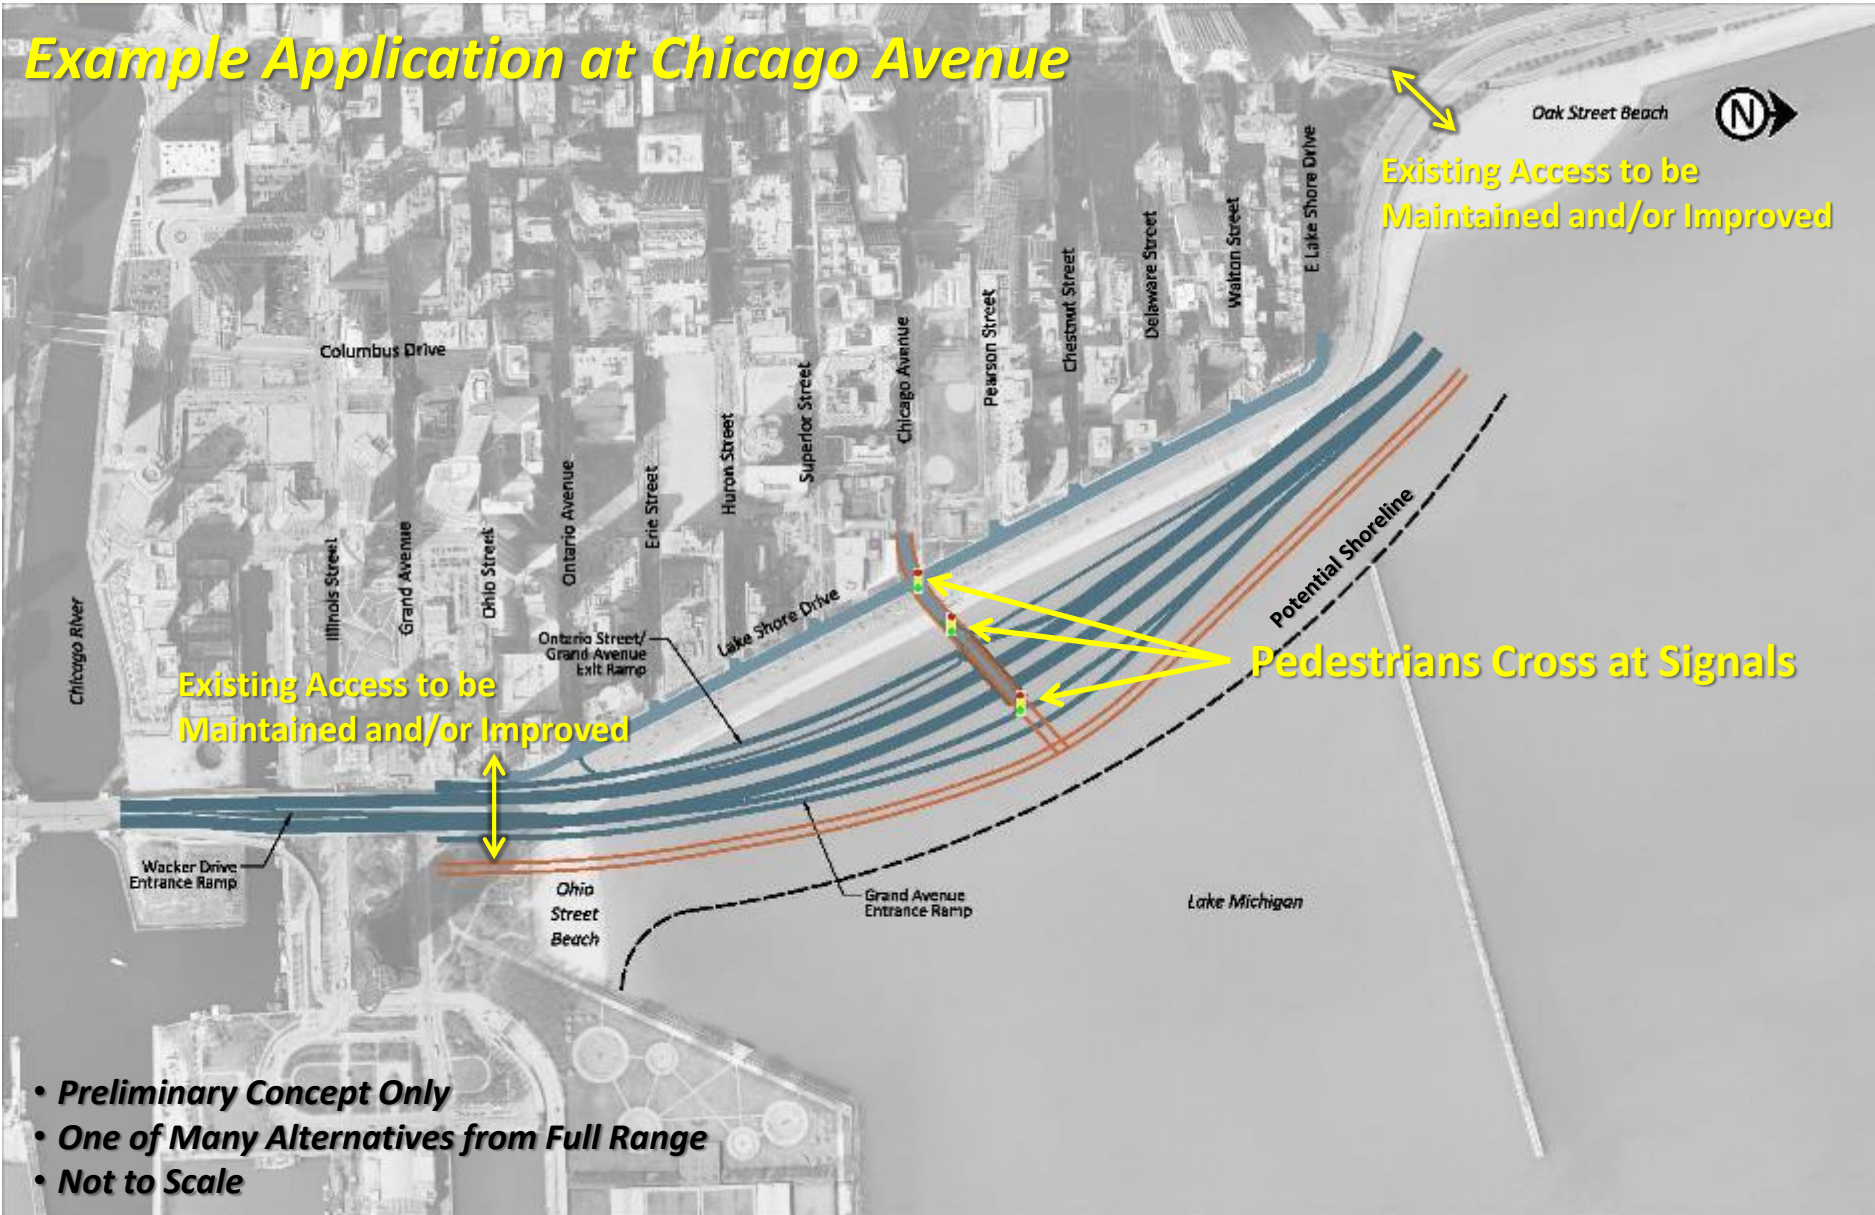

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Non-Motorized Access – Conventional

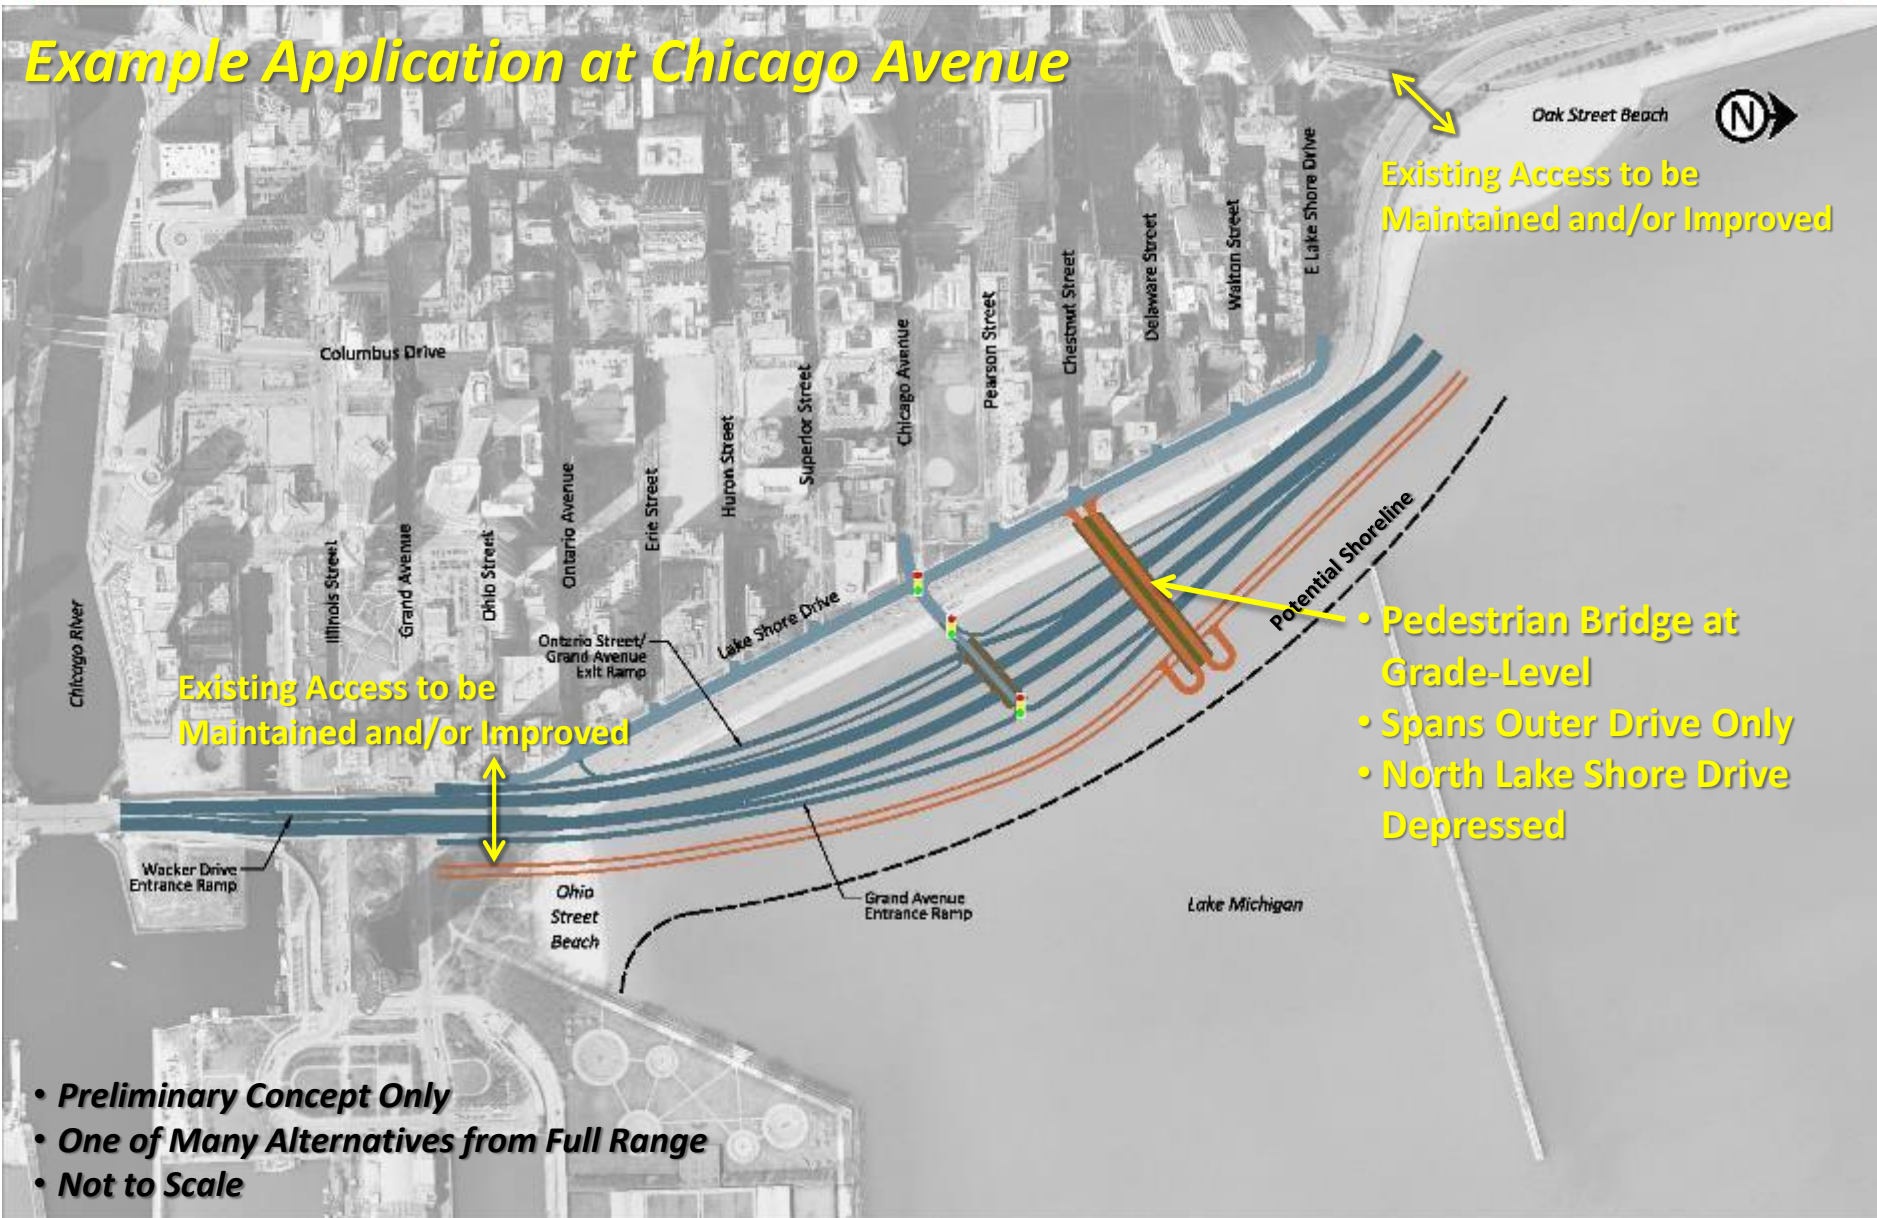

Example Application at Chicago Avenue

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Non-Motorized Access: Pedestrian Bridge

Example Application at Chicago Avenue

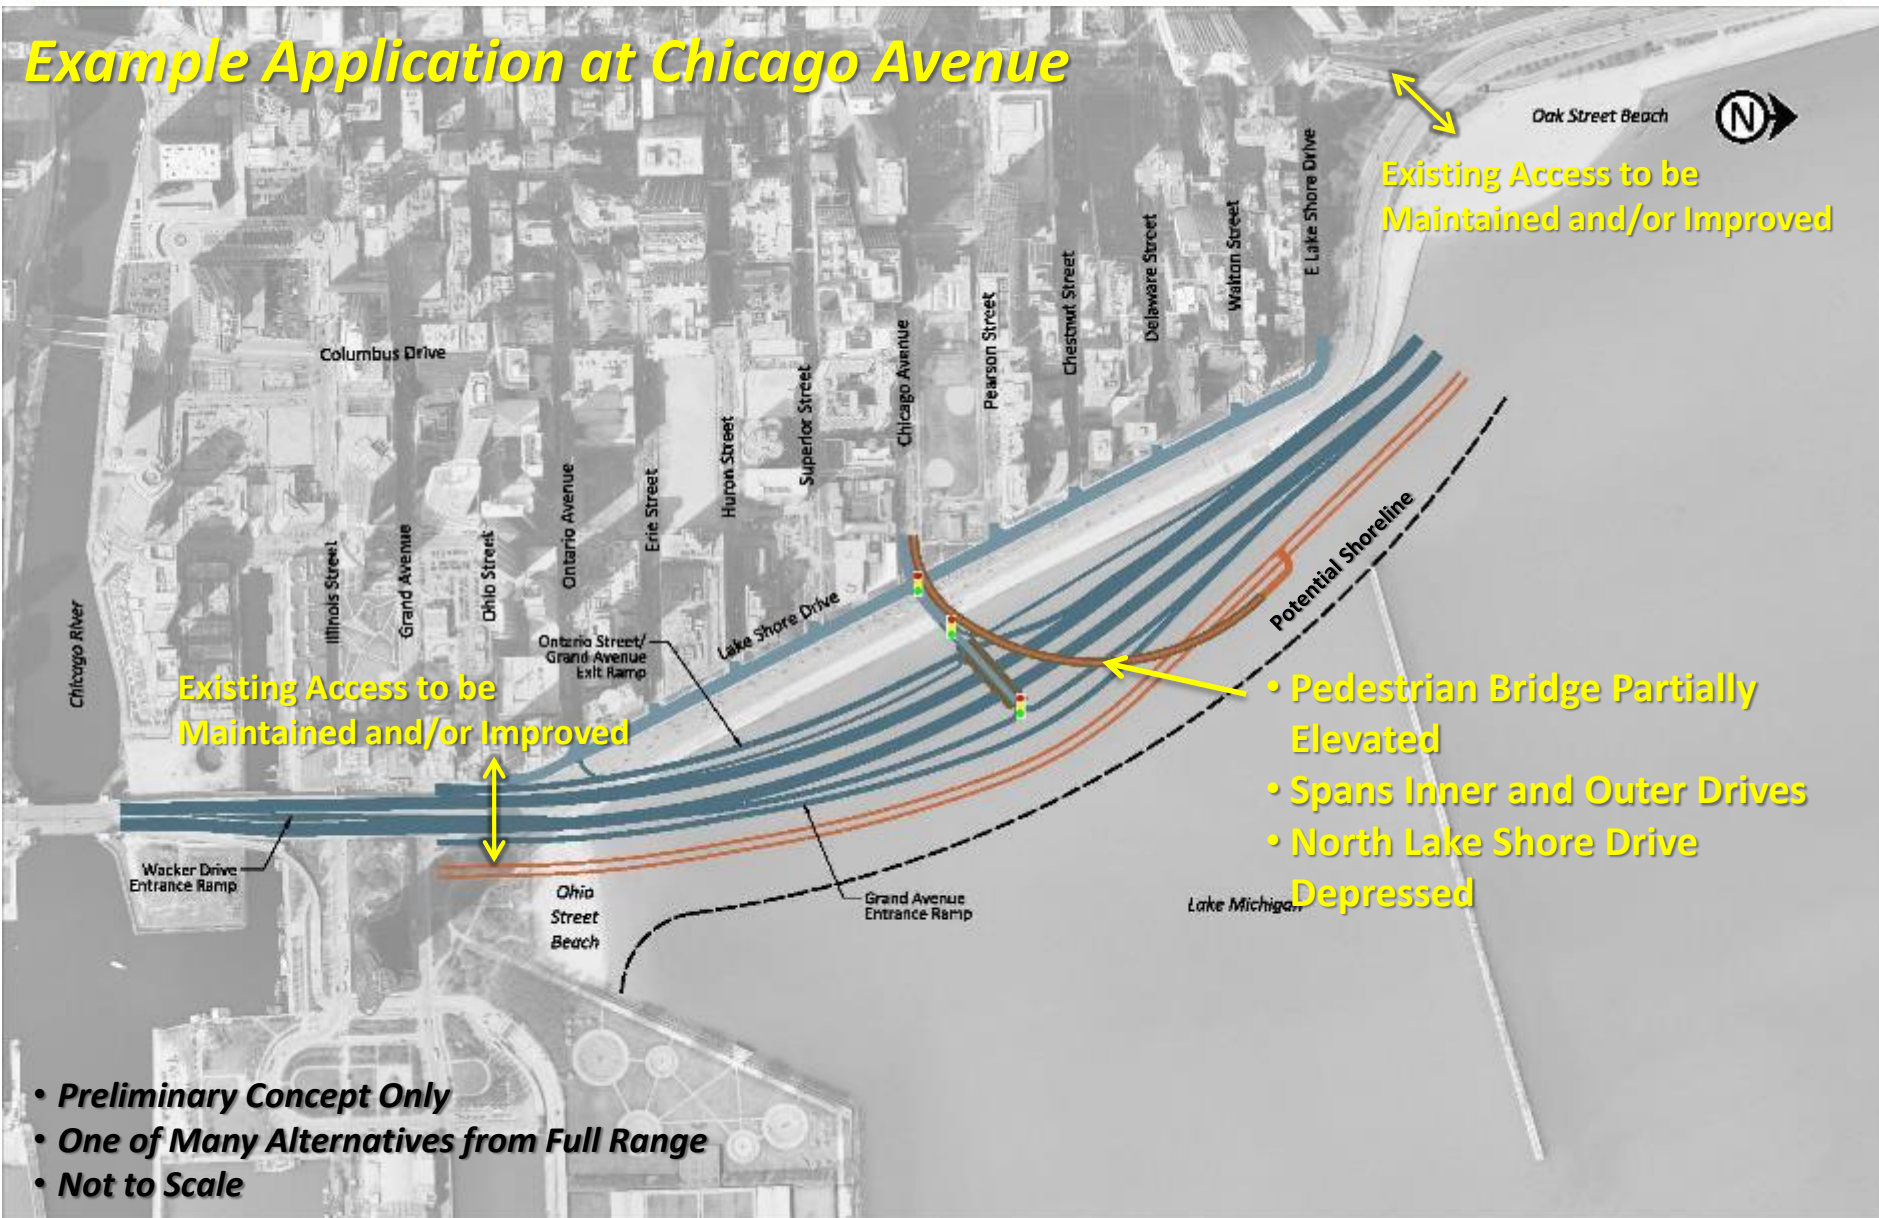

- Pedestrian Bridge at Grade-Level
- Spans Outer Drive Only
- North Lake Shore Drive Depressed

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Non-Motorized Access: Signature Pedestrian Bridge

Example Application at Chicago Avenue

Existing Access to be Maintained and/or Improved

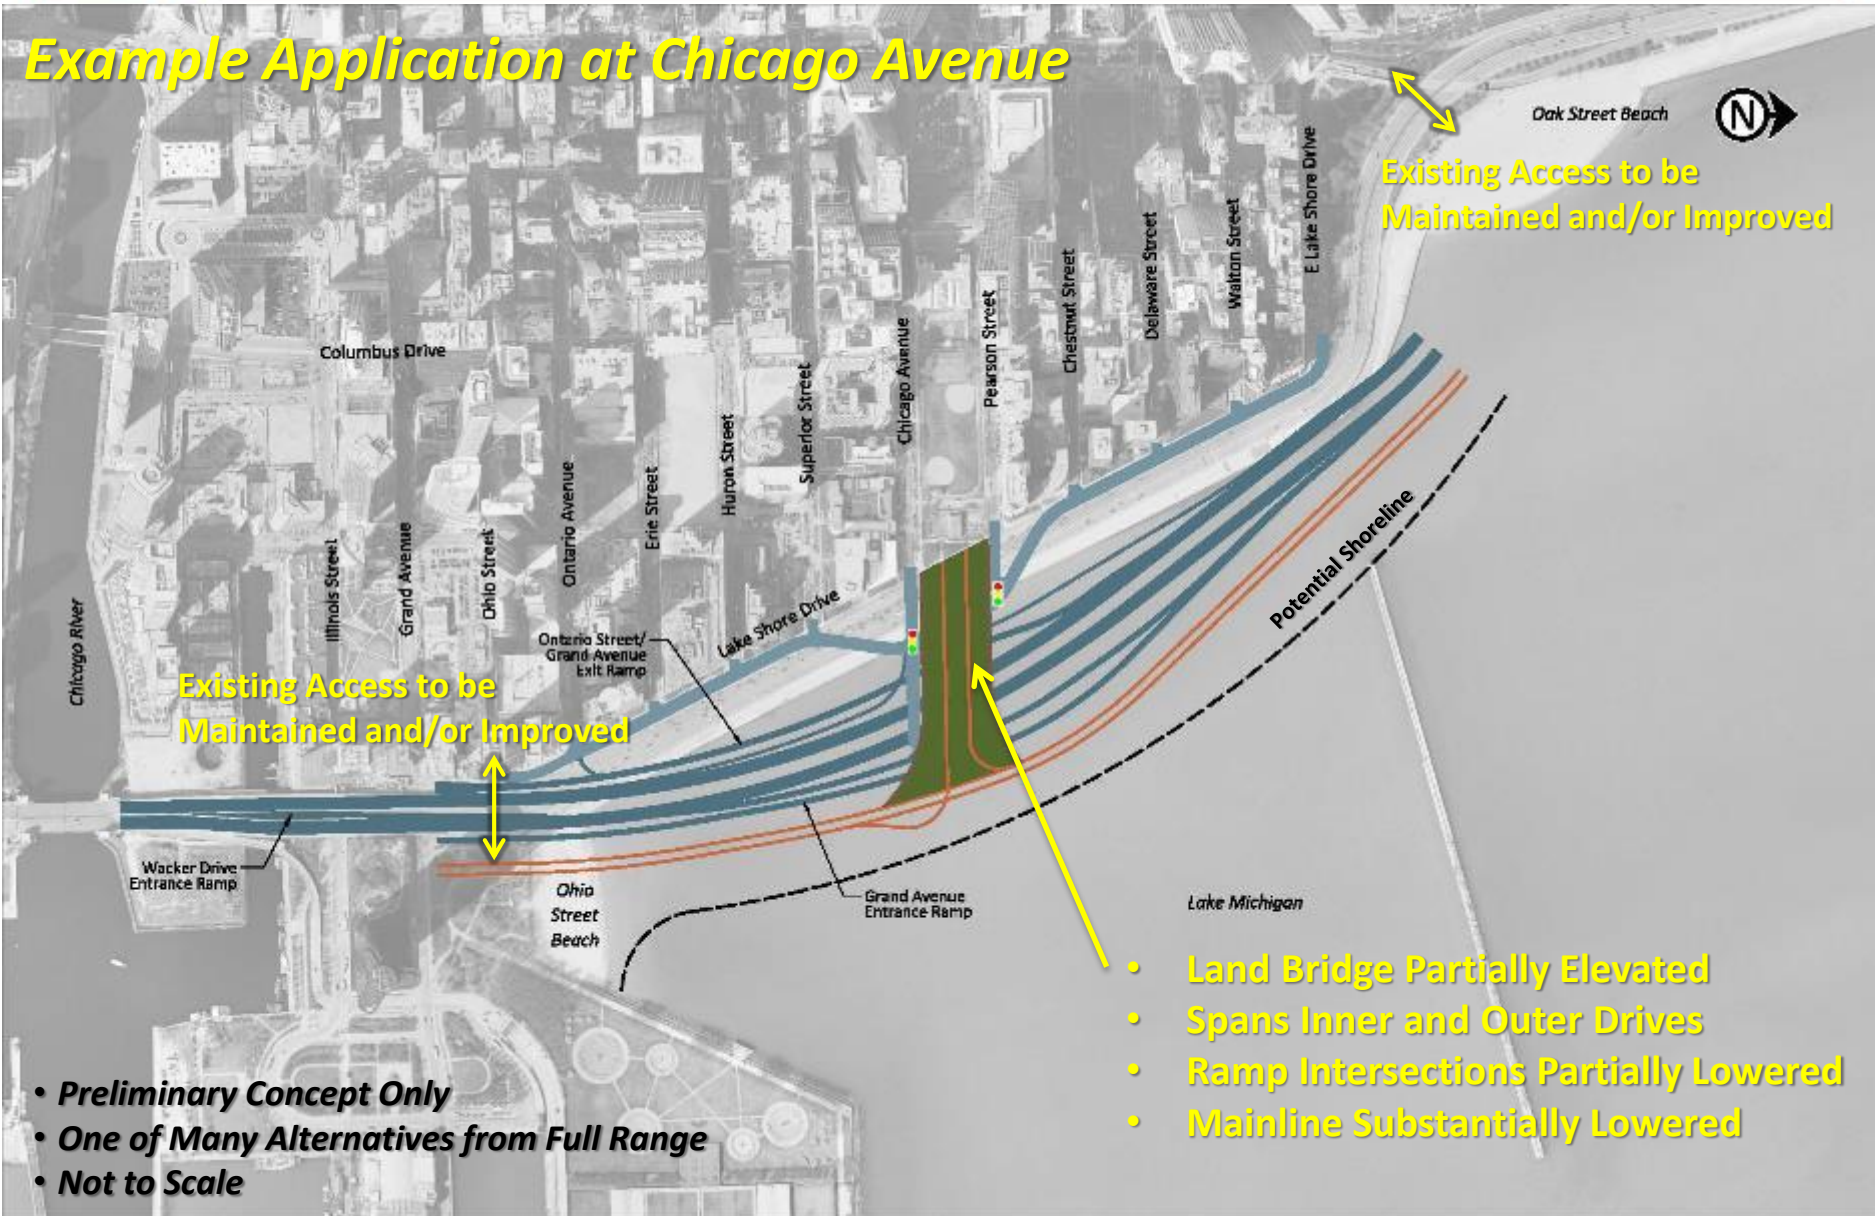

Existing Access to be Maintained and/or Improved

- Pedestrian Bridge Partially Elevated
- Spans Inner and Outer Drives
- North Lake Shore Drive Depressed

- Preliminary Concept Only
- One of Many Alternatives from Full Range
- Not to Scale

Non-Motorized Access: Pedestrian Land Bridge

Example Application at Chicago Avenue

- **Preliminary Concept Only**
- **One of Many Alternatives from Full Range**
- **Not to Scale**

- **Land Bridge Partially Elevated**
- **Spans Inner and Outer Drives**
- **Ramp Intersections Partially Lowered**
- **Mainline Substantially Lowered**

Environmental Resources at Chicago Avenue

Relatively Few Environmental Resources/Constraints

Historic Resources

Park Resources

Environmental Resources at Belmont Avenue

Many Environmental Resources/Constraints

Chicago Junction Footprint at Belmont Avenue

This Chicago Junction footprint is not feasible at Belmont Avenue.

Chicago Avenue Compressed Diamond Junction Footprint, Overlaid At Belmont Avenue

Information Tables

- **Chicago Avenue Junction Case Study**
- **Environmental Resources Considerations**
- **Transit and Non-Motorized Travel Considerations**
- **Shoreline Considerations**

Next Steps

- **Continue initial range of feasible alternatives development**
 - Building block approach
 - Complete Travel Demand Modeling for corridor
- **Evaluate initial alternatives:**
 - Qualitative evaluation for major flaws and P&N agreement
 - Qualitative and quantitative assessment of safety, mobility, access/circulation and planning level costs
- **Continue to work with CPC/TF on alternatives creation**
 - Task Force #5 anticipated 2016

North Lake Shore Drive
