

BANKS STREET & INNER DRIVE

Existing Conditions

- Ground level experience along Inner NDLSD is dominated by vehicles and roadway pavement
- Narrow space between Inner and Outer drive lanes leaves no space for pedestrians, cyclists or landscaping
- Existing design of Inner NDLSD makes crossing traffic lanes difficult to access Northbound transit, and limited space for boarding buses between Inner and Outer lanes

Potential Future Condition

- Improved intersection and roadway design prioritizes pedestrian crossings at intersections.
- Additional space between inner and outer NDLSD can accommodate landscaping, trees and a multi-purpose trail space that connects users to lakefront access points
- Northbound transit users will have bus boarding spaces that provide separation from outer NDLSD traffic lanes
